1. INTRODUCTION

1. This Performance and Learning Review (PLR) summarizes progress under the World Bank Group Country Partnership Framework (CPF) for the Uganda for FY16-21 discussed by the Board of Executive Directors on April 21, 2016 (Report No. 101173-UG). Preparation of the PLR began in FY19 as intended, but was delayed due to changes in World Bank country management, a protracted process for reaching agreement with Government on new development priorities to be supported by the World Bank, and challenges posed by a series of unfolding socio-economic crises to which the WBG has responded, most recently, the Desert Locust invasion and Coronavirus Disease 2019 (COVID-19) pandemic. Given the timing and the significant changes in context, this PLR serves to: (i) provide an updated assessment of the performance and status of the CPF program; (ii) extend the CPF period by one year; and (iii) reflect adjustments made to ensure the program's continued relevance and effectiveness as Uganda confronts multiple crises and embraces opportunities for a stronger recovery.

2. The CPF was designed to contribute towards the Government of Uganda's (GoU) vision of a country transformed into a modern and prosperous nation by 2040. Underpinned by the 2015 Systematic Country Diagnostic (SCD) and aligned with national priorities articulated in Uganda's second National Development Program (FY15-19), the CPF focused selectively on six thematic objectives grouped among the following three strategic areas: (i) strengthening governance, accountability and service delivery; (ii) raising incomes in rural areas; and (iii) boosting inclusive growth in urban areas.

3. Changes to the development context, coupled with implementation challenges and emerging priorities and crises, have required substantive adjustments to the country program during the CPF period. Safeguards concerns and evolving client demands combined to shrink the space in which the program could operate. At the same time, challenging governance arrangements, a massive inflow of refugees, and a series of crises, including the 2019 Desert Locust invasion and the COVID-19 pandemic, created opportunities for Uganda's needs and Government's priorities to align with WBG comparative advantages, including the ability to exercise judicious flexibility and to respond rapidly. With project cancelations, extensions and additions, the size and composition of the World Bank's portfolio differ significantly from that laid out in the CPF program. However, the existing CPF focus areas and objectives remained and continue to be relevant for Uganda through the extended program period.

4. Despite the challenging context and complex operating environment, net commitments have increased significantly, portfolio performance is improving, and positive results are being realized across all focus areas, as well as in enhancing social risk management. The program is building the resilience of poor and vulnerable households, particularly in Northern Uganda; responding to refugee inflows; increasing access to skilled health care; significantly raising agricultural yields, increasing rural land registrations and tenure security; enhancing economic management; improving the business environment and beginning to restore the adequacy and equity of delivery of health and education services. Seven of twelve outcomes are on track to be achieved during the CPF period.

5. The COVID-19 pandemic threatens the health and well-being of the Ugandan people, the country's economy, and its development gains. Uganda recorded its first confirmed coronavirus case on March 27, 2020 and by March 25, 2021 the number of cases totaled 40,734 and 334 fatalities.¹ The Government enforced early and stringent measures to contain the pandemic, imposing restrictions on cross-border travel, public and private transport and public gatherings, and closing schools and other non-essential institutions. Real Gross Domestic Product (GDP) growth is projected to have fallen more than three percentage points between FY19 and FY20, and the fiscal deficit to have worsened from 4.9 percent of GDP pre-COVID to 7.2 percent in FY20 and to about 8 percent in FY21.

6. The PLR extends the current CPF by one year to FY22, in line with the WBG COVID-19 Crisis Response Approach Paper's 2020 (Approach Paper) recommendation to defer the development of new CPFs until the return of more steady conditions. This extension would allow the next CPF for a mid-term period beyond FY23 to be more fully articulated during FY22, following presidential elections on January 14, 2021 and in the wake of the COVID-19 pandemic. The new CPF would be informed by an upcoming Systematic Country Diagnostic update (to be completed in FY21) and to incorporate the results of a new Uganda National Household Survey (FY21).

7. This PLR adjusts the country program to respond to COVID-19 challenges, which aligns with ongoing deepening WBG support for human capital development, economic inclusion and social and physical resilience and supports IDA19 commitments. Through flexible and innovative approaches, the World Bank has found opportunities to support an expansion of human capital investments in Uganda. The Uganda portfolio is also gradually being adjusted toward a more transformational impact on the twin goals, increasingly utilizing performance-based financing for service delivery, and scaling interventions that have demonstrated impact by growing the average size of operations. In response to the series of challenges over the CPF period, the program is also focusing on improving both physical resilience, through land management and urban development, and social resilience with better social risk management, expanded social protection, a multi-sectoral response to forced displacement, and renewed attention to women's empowerment. Finally, the country program has broadened the engagement on governance through enhanced analysis and capacity building, trust funds that include development partners in policy dialogue, recent policy-based financing, and a significantly enhanced community and stakeholder engagement strategy which together have allowed the reestablishment of a reform agenda for Uganda. The results framework has been amended to reflect recent events and expected achievements, address measurement challenges, and identify data sources.

2. MAIN CHANGES IN COUNTRY CONTEXT

A. POLITICAL DEVELOPMENTS AND OUTLOOK

8. The Government of Uganda's development strategy remains focused on achieving middle-income status through speeding industrialization and strengthening competitiveness, supported largely by infrastructure investments. The mid-term review of Uganda's second National Development Plan (NDPII) in FY17 found that the achievement of middle-income status in 2020 would be delayed as the strategy to frontload public infrastructure investments had not yet delivered intended results. Nevertheless, Government's medium-term priorities remain focused on economic transformation through infrastructure improvements. The third NDP (NDPIII, 2021-2025) aims to strengthen competitiveness by prioritizing agriculture, mineral development, and tourism, leveraging urbanization as a catalyst for growth, and calls for investments in energy, transport, irrigation, and digital infrastructure.

9. The WBG country program has found practical solutions to balance the Government's preference for infrastructure investments with the World Bank's emphasis on human capital, yielding good results. An increase in infrastructure spending between 2011 and 2013 led to a decline in allocations to the social sectors². The Government, supported by the World Bank's analytical and operational efforts, in 2017 embarked on reforms to reverse this trend, increasing fiscal transfers for non-wage recurrent and capital spending in health and education. The recurring crises facing Uganda during the CPF period and WBG-supported responses have resulted in a new objective in the NDPIII to upskill the Ugandan labor force and to plan for refugee inflows more effectively.

10. The general elections, held early 2021, has posed some new risks to the delivery of the World Bank's remaining CPF program. During the election period, heightened political activity amidst a COVID-19 environment saw increased spending pressures, some reprioritization of the budgetary resources away from development priorities. Since the elections, Uganda continues to experience a somewhat charged social and security context, which if protracted could affect new pipeline and implementation of ongoing programs. After a pause in the third quarter of FY21, six operations are scheduled for delivery in the fourth quarter and another six operations in FY22.

B. ECONOMIC DEVELOPMENTS AND OUTLOOK

11. Uganda's economic growth rebounded in 2018 and 2019. This growth followed a period of contraction between 2011 to 2017, owing to droughts, sub-regional conflicts³, private sector credit constraints, and weak execution of public projects. Adjusted GDP estimates⁴ show that real GDP grew by 6.8 percent in FY19 driven by strong domestic consumption, sustained levels of public and private

² The share of education and health in total public spending declined to 15 and 24 percent, respectively by 2013, compared to average of 16.7 and 44 percent for Sub-Saharan Africa (SSA) countries. These declines resulted in worsening education outcomes, and while health outcomes improved, they remain far below international standards.

³ Sub-regional conflicts in the Democratic Republic of Congo (DRC) and South Sudan.

⁴ In October 2019, the Uganda Bureau of Statistics released new GDP estimates, updating the base year for estimating economic activity to 2016/17 from 2009/10.

investment, and favorable weather conditions. These new estimates also reveal a shift in the structure of the economy with the share of industry rising from about 20 percent under the old GDP estimates to almost 30 percent of GDP (largely due to manufacturing doubling its share from 8 to over 16 percent of GDP following the rebasing exercise as well as a corresponding drop in the share of services).

12. Uganda's growth has since contracted. The COVID-19 pandemic and the Desert Locust invasion in the second half of FY20 exacerbated a slowdown in the first half of FY20 caused by heavy rains and flooding. COVID-19 mobility restrictions have affected domestic demand, while the global slowdown has reduced exports, tourism, remittances, and caused a sizable deceleration in foreign direct investment (FDI) inflows and government project financing.⁵ As a result, earlier growth estimates for FY20 and FY21 have been revised downwards to around 2 to 3 percent. The decline in real GDP growth could be even larger if the COVID-19 outbreak continues to weigh on the global and regional economy, and/or if Uganda faces a more widespread transmission that requires extended periods of mobility restrictions.

13. The COVID-19 crisis has created significant fiscal and external imbalances (see Annex 4 for key macroeconomic indicators). The expected revenue loss from COVID-19 measures to support the private sector was estimated at 0.18 percent of GDP in FY20, while tax revenues more broadly were expected to fall by 0.7 percentage points of GDP to 11.6 percent of GDP for FY20. The fiscal deficit is estimated to have risen to 7.2 percent of GDP in FY20 (relative to a pre-COVID estimate of 5 percent of GDP) and to grow to about 8 percent of GDP in FY21. The fiscal deficit continues to be funded mostly through external financing, but domestic borrowing also intensified in FY19 and FY20. During FY20, multilateral concessional financing and commercial borrowing totaled US\$670 million, while domestic borrowing that had doubled in FY19, further expanded in FY20 to 2.8 percent of GDP. These elevated levels of domestic borrowing at rising interest rates are crowding out private sector borrowing. Although inflationary pressures remain subdued to date, spillover effects onto domestic prices are expected.

14. On the external side, the collapse in consumption and investment due to COVID-19 reduced imports and incomes earned by foreign investors and narrowed the current account deficit to an estimated 5.9 percent of GDP in FY20 from 6.8 percent (the year before). The financing of the current account deficit also shifted from non-debt creating FDI inflows to government borrowing. Net FDI declined by 21 percent during FY20, while net portfolio outflows widened by an additional 0.9 percent of GDP. To close the gap, Government borrowed about US\$1.5 billion, pushing net borrowing to 4.6 percent of GDP. These inflows financed 82 percent of the external shortfall in FY20 allowing foreign reserves to grow to 5.4 months of imports and hold at comfortable levels since June 2020 which has stabilized the Ugandan shilling.

⁵ In the wake of COVID-19, exports are expected to decrease in response to shrinking global demand and border restrictions, travel to Uganda and tourism revenues will decline sharply, remittances from Europe, the Middle East and Africa will fall, and Foreign Direct Investment_{bi} (FDI) into the nascent oil industry and the mining and manufacturing sectors will almost certainly be delayed.

15. Uganda's risk of debt distress (assessed in the April 2020 joint International Monetary Fund (IMF)-World Bank debt sustainability analysis⁶) remained low, but now appears likely to deteriorate to a moderate risk. Ugandan authorities have a good track record of sound macroeconomic management and have committed to maintaining macroeconomic stability going forward. However, with total debt service (interest and principal due) expected to average around 55 percent of government revenues over the next three years, Uganda faces heightened liquidity vulnerabilities. Maintaining public debt on a sustainable path will require raising tax revenues; strengthening the budget process to ensure that budget targets become more binding; improving the effectiveness of public spending and public debt management (including continuing to maximize concessional borrowing); and undertaking more comprehensive monitoring, controlling and reporting of fiscal risks (including contingent liabilities and state-owned enterprise debt). With heightened risks and the country's reduced capacity to carry debt, the risk of debt distress is expected to deteriorate to moderate in the next Debt Sustainability Analysis (DSA).

C. CHANGES IN POVERTY REDUCTION AND SHARED PROSPERITY.

16. Prior to the COVID-19 pandemic, Uganda's progress on poverty reduction and shared prosperity was mixed and characterized by high vulnerability to weather shocks.⁷ Poverty in Uganda, measured by the national poverty line, declined from about 39 percent in 2002/03 to about 20 percent in 2012/13. According to the latest available official poverty estimates, the poverty rate increased modestly from 19.7 in 2012/13 to 21.4 percent in 2016/17, resulting in about 1.4 million Ugandans slipping into poverty. A severe drought in 2016 and 2017 which negatively affected the incomes of agricultural households was the most important contributing factor to the poverty increase which was most pronounced in rural areas. Between 2012 and 2016, the bottom 40 percent of the population also benefited less from economic gains, resulting in a rise in inequality. Vulnerability remained high with two out of three people falling back into poverty due to income fluctuations, food insecurity, and climate-related shocks. Given high economic growth in 2018 and 2019, Uganda might have returned to a steady pace of consumption growth and poverty reduction during this period.

17. In the last decade, Uganda has seen minimal progress in the Human Capital Index (HCI). The HCI rose from 0.34 in 2010 to 0.38⁸ in 2020 (pre-COVID, mainly measured in 2018) reflecting modest increases in all the composite indicators, including under 5 mortality and nutrition, years of schooling, learning outcomes, and life expectancy.

18. The economic impacts of COVID-19 will push many more households into poverty as social protection programs have not proven adequate. After restrictions were put in place in March 2020, about 17 percent of respondents to the June 2020 round of the Uganda High Frequency Phone Survey (UHFPS) had stopped working. As expected, work stoppages were highest in sectors which require

6 The Board of Executive Directors' meeting to discuss the DSA was held on Wednesday, May 6, 2020.

7 The Board of Executive Directors' meeting to discuss the DSA was held on Wednesday, May 6, 2020.

8 A child born in Uganda today will be only 38 percent as productive when she grows up as she could be if she enjoyed complete education and health in her early years.

face-to-face interactions such as services, transport, and commerce. By the August round of the UHFPS the overall employment rate among respondents had returned to pre-COVID levels, but urban employment has not fully recovered, and household income levels continued to be well below what they were before the pandemic.⁹ Agriculture growth data and initial UHFPS results suggest that that sector has fared better than others, but impacts are being monitored closely. Finally, Uganda's large refugee population remains more acutely vulnerable, with its dependence on humanitarian support, insecure livelihoods, and limited access to water and sanitation. Existing social protection programs have not proven as timely, adequate nor well targeted as expected, such as the working poor living in urban and peri-urban areas.

D. EMERGING DEVELOPMENT CHALLENGES AND OPPORTUNITIES

19. The CPF period has seen an increasing centralization of decision-making which has muted the effectiveness of Uganda's historically strong development institutions. Political considerations are increasingly overriding technical analysis in a broader range of development issues – and beyond electoral periods – often leading to delays in program design and implementation. Uganda's Worldwide Governance Indicators (WGI) on voice and accountability, government effectiveness and regulatory quality have trended downward from 2013 to 2018. Reversing an earlier decline between 2008 and 2013, the control of corruption indicator has seen a marginal increase in the last five years reflecting the creation of an anti-corruption unit in the State House in 2018 and an anti-corruption division in the High Court.

20. The CPF period has been marked by safeguard issues requiring strong responses by the World Bank and the Government. Four requests for inspection cases have been initiated for Uganda operations – the most notable in December 2015 involving gender-based violence (GBV)/sexual exploitation and abuse (SEA) and labor influx issues under the Transport Sector Development Project (TSDP - P092837). The World Bank canceled the project, suspended the roads components of two additional projects, and froze the Uganda pipeline in FY17. Implementation of the resulting Management Action Plan has led to a significant strengthening of the National Roads Authority's capacity for social risk management (now sharing its experience elsewhere in Africa), improved collaboration among government agencies, a Government pilot of new methods in the identification and management of GBV cases, the inclusion of strengthened safeguards measures in civil works bidding documents, and the retrofitting of 16 projects in the Uganda portfolio with improved GBV/SEA measures. Three subsequent operations are notable: (i) the Development Response to Displacement Impacts Project (DRDIP, P152822) fosters social and cultural change toward gender equality and enhancing district capacity for prevention and response to GBV both in refugee and hosting communities; (ii) the Supporting Children's Opportunities through Protection and Empowerment (SCOPE, P161704) has helped to improve response and prevention of sexual violence against children (VAC); and (iii) the COVID-19 Economic Crisis and Recovery Development Policy Financing (P173906) has supported approval of the National Child Policy to address violence against children and young

⁹ For example, after the COVID-19 outbreak and during the initial lockdown, about 91 percent of households involved in non-farm family businesses suffered income losses (i.e., less or no earnings). Contraction in transfers from family within the country was observed among 83 percent of households who received this type of income in the last 12 months.

women. The other Inspection Panel requests cover a range of social and environmental issues that have also resulted in a heightened monitoring and management by both the Government and the World Bank. Moving forward the WBG is looking at issues of women empowerment more broadly. Technical assistance has been provided to Ministry of Gender, Labour, and Social Development and the Ministry of Finance, Planning and Economic Development to establish a policy dialogue platform on women's economic empowerment in FY21. This includes operational support to stakeholder's engagement, policy dialogue and knowledge generation and communications. The technical assistance deliverables are setting the foundations for developing an operation to empower women and girls in Uganda with emphasis on livelihoods, entrepreneurship, and access to jobs.

21. Uganda is experiencing one of the largest, most complex, and rapidly evolving refugee situations in the world while receiving international recognition for implementing the Global Compact on Refugees. Between 2015 and 2017, the country's refugee population more than doubled because of the crisis in South Sudan. Uganda is one of very few countries to have adopted an integrated service delivery approach where over 1.4 million refugees enjoy the right to work, to move freely (pre-COVID-19), to own property and to equal access to social services like Ugandan nationals. In response to refugee inflows, the WBG mobilized US\$500 million through the IDA18 Regional Sub-Window for Refugees and Host Communities (RSW) and allocated US\$330 million from the IDA19 Window for Host Community and Refugees (WHR). These resources have been programmed across a significant number of operations in the World Bank's portfolio to help build the self-reliance of refugees and strengthen infrastructure and integrated social service delivery in refugee hosting regions. Recently approved projects continue substantial support to improve transport, education, health, rural water and sanitation and small-scale irrigation services to refugee and host communities. Proposed operations include the Digital Acceleration Program aimed at improving digital connectivity, including in these refugee and host communities, and the Skills Development in Refugee and Host Communities Project.

22. The Desert Locust invasion which reached Uganda in February 2020 and threatened to undermine food security and livelihoods of millions of Ugandans demanded an immediate response. By May 2020, locusts had infested 24 districts in six sub-regions. To support the Government's control plan, the Bank made available US\$1 million under the Agriculture Cluster Development Project (P145037) and an additional US\$48 million for the Emergency Locust Response Project (ELRP, P173702). Although no swarms have been sighted in Uganda since September 2020, the threat remains.¹⁰ The ELRP, which is being restructured now, will benefit over 2 million direct and indirect beneficiaries through livelihood recovery and further strengthening early warning systems.

23. During the CPF period, Uganda has faced several epidemics¹¹ and is now responding to the COVID-19 pandemic. Reflecting experience gained, and with some support from the World Bank, the country ranked 63rd out of 195 countries on the 2019 Global Health Security Assessment and is among only four African countries to exceed the world average. Leveraging these strengths, the Government moved quickly to respond to the COVID-19 pandemic with movement restrictions, critical health

¹⁰ Favorable climatic conditions in the Horn of Africa and Yemen continue to enable locust activity.

¹¹ Epidemics include Crimean Congo hemorrhagic fever, Marburg virus disease, Rift Valley fever, Anthrax, Meningitis, Measles, Cholera and Ebola.

services, and other measures to protect vulnerable households and limited support the private sector. The World Bank has supported Uganda by twice triggering the Contingent Emergency Response Component (CERC) in the Uganda Reproductive, Maternal, and Child Health Services Improvement Project (URMCHIP, P155186) - for Ebola in December 2019 and for COVID-19 in March 2020; and approving the Uganda COVID-19 Emergency Response Project (US\$15.2 million, including US\$2.7 million grant from PEFF, (P174041)) under the COVID-19 Fast Track Facility (FTF) and the Emergency COVID-19 Economic Crisis and Recovery DPF (ECR-DPF, P173906, US\$300 million). The ECR-DPF expands some safety nets and measures to cushion firms while also fostering longstanding reform issues, including debt transparency, targeting of agricultural subsidies and measures to address GBV/SEA. The pandemic now puts at risk Uganda's recent development gains: (i) threatening a collapse of economic growth, and fiscal and external imbalances; (ii) disrupting social service delivery; and (iii) likely increasing poverty and stagnating or reversing recent social gains.

3. SUMMARY OF PROGRAM IMPLEMENTATION

A. PROGRAM AND PORTFOLIO PERFORMANCE

24. Aligned with Government's priorities from NPDII and seeking to address key constraints to the twin goals, the CPF lays out three main areas of engagement: (i) strengthening governance, accountability and service delivery; (ii) raising income in rural areas; and (iii) boosting inclusive growth in urban areas which remain relevant in the COVID-19 and post COVID-19 periods. The financing program included a large, ongoing, but young portfolio in FY16, and proposed an indicative lending program with identified operations for the first two years (FY16 and FY17) and areas for potential future lending for the remaining four years (FY18-FY21).

25. The size and composition of the program differ markedly from that laid out in the CPF due to changes in context and other developments and the World Bank's responsiveness (see Annex 5). The resumption of budget support envisioned in FY16 was stymied by governance challenges. After two failed attempts to deliver, the five planned or indicative DPOs referenced in the CPF were dropped due to concerns shared by all stakeholders. Then, the macroeconomic, fiscal, and social imperatives brought on by COVID-19 raised the exceptional need for an emergency budget support operation which was approved in June 2020, following extensive discussions with Uganda's development partners and WBG shareholders. Delays in project effectiveness (averaging 14 months) and other implementation challenges required ten extensions of project closing dates. The pipeline was suspended in FY17 because of safeguard issues described above (para. 19) and poor portfolio performance. The World Bank acted quickly and effectively during FY19-21 to help Uganda respond to refugee inflows with US\$500 million in additional IDA financing, and in FY20 to the Desert Locust invasion and the COVID-19 pandemic with four unanticipated operations. Provision of health, education and several other local services shifted from line ministries to local governments, creating opportunities for new engagements with local governments that have helped to avoid some common bottlenecks at the central government level. The development objectives of recently delivered and planned projects respond directly to IDA19 priorities (see Annex 5).

26. Net IDA commitments in Uganda have increased significantly, in part due to utilization of IDA refugee windows and Locust¹² and COVID-19 financing, while the average size of operations has grown from US\$108 million to US\$132 million per project (see figure 1). Total net commitments for national projects increased from US\$2.1 billion in FY16 to US\$3.7 billion by mid FY21, including US\$500 million from the IDA18 Refugee Sub Window and US\$330 million from IDA19 WHR, while regional projects accounted for US\$426 million in commitments by FY21. To date, 20 operations have been approved totaling US\$2.7 billion¹³, comprising twelve national investment project financings (IPFs) including two additional financings (AFs), two national Program-for-Results (P4R) financing and related AFs, and four regional integration (RI) IPFs including one AF. Portfolio consolidation

12 There is no specific financing envelope for locusts. Financing was from regular Performance-Based Allocation (1/3) and regional envelope (2/3).

13 As of February 22, 2021. This figure does not include a social development project that was delivered and canceled prior to effectiveness.

efforts successfully contained the number of projects to 22 in FY20 by prioritizing larger and more transformative operations. With new emergency operations approved in FY20 and FY21 and project extensions due to COVID-19 challenges, the number has since increased to 32 in FY21, but is expected to start reducing again in FY22.

Figure 1: Uganda Project Evolution (FY16-FY22)¹⁴

Figure 2: Trend in Disbursement Ratio (FY16-FY20)

27. With pro-active management, portfolio performance has improved during the CPF, but requires continued attention. Disbursements have increased markedly from 10 percent in FY16 to 22 percent in FY20 (see Figure 2). The current disbursement ratio is 13.48 percent¹⁵ and expected to close above 20 percent¹⁶ at year-end (FY21). Close World Bank and client attention to portfolio implementation, including safeguards management, has reduced commitments and projects-at-risk drastically. No ineligible expenditures have been reported to date during the CPF period. The number of problem projects fell from five in FY16 to three in FY20 and to one in FY21. Proactivity improved from 40 percent in FY15 to 75 percent in FY19 and 67 percent in FY21.

28. The International Finance Corporation (IFC) committed portfolio in Uganda totals US\$268.9 million. Current projects finance complementary investments in the infrastructure, agribusiness, financial and services sector. Recent transactions include the US\$4 million financing of Ciel Healthcare Limited (an existing client) - the first healthcare project processed under the RSE COVID-19 Facility in the Africa region to support funding requirements resulting from the impact of the COVID-19 pandemic at its subsidiary International Medical Group (IMG), a leading private healthcare service provider in Uganda. Dialogue with IFC is ongoing to identify opportunities as part of the WBG's response to the pandemic. (See Annex 7 for IFC investment and advisory services portfolio and pipeline.

¹⁴ The COVID-19 and Locusts emergencies saw the proliferation of small emergency operations that increased the project count while at the same time lowering the average commitment size. Three operations approved during this period have a total commitment of US\$75 million. Five projects are scheduled to exit the portfolio at the end of FY21.

¹⁵ Disbursement ratio as of March 11, 2021.

¹⁶ Equal to the planned regional average.

29. Multilateral Investment Guarantee Agency (MIGA) exposure stood at US\$426 million¹⁷ with one project in the power sector and another in the financial sector. The Bujagali hydropower operation includes three guarantees covering breach of contract risk issued in FY18 and FY19, with a gross outstanding exposure of US\$384 million. The second project entails a capital optimization transaction for Barclays Bank of Uganda issued in FY20, with a gross outstanding exposure of US\$42 million; this project supports Absa Bank's lending operations in the country. Also, Uganda will potentially benefit from MIGA's guarantee of EUR359 million covering loans to the Eastern and Southern African Trade and Development Bank (TDB)¹⁸, to support the growth and diversification of the Bank's trade finance portfolio throughout the COMESA region. The facility includes EUR50 million specifically earmarked for on-lending toward COVID-19 response activities. (See Annex 8 for MIGA's portfolio).

30. Technical assistance and analytics have played a critical role in shaping policy reforms and sector dialogues. Since FY16, forty-seven Advisory Services and Analytic (ASA) products have been completed, including key core ASA: viz a Country Economic Memorandum (FY16), Debt Management Assessments (FY19), Poverty Assessment (FY18) and a series of Public Expenditure Reviews FY9-FY20 (see Annexes 1-3). Extended ASA include sector reviews to support agriculture and social sector lending, and the Refugee and Host Population Empowerment Framework (FY18). ASA covering refugee user fees, and a roadmap toward humanitarian service delivery has facilitated rollout of water and sanitation reforms and services for refugees and host communities. Nine editions of the biannual Uganda Economic Update (UEU) series have been influential in informing the policy dialogue, most recently on social protection and safety nets, and agriculture. With 23 ASAs currently ongoing, the portfolio is at full capacity and going forward will focus on fewer, more strategic products (see Annex 5).

31. In the past year, the World Bank approved loans to support a series of emergency operations to help Uganda address the COVID-19 pandemic and its social and economic impacts and the Desert Locust invasion. These include:

- the emergency COVID-19 Economic Crisis and Recovery DPF (P173906, US\$300 million) which focused on *inter alia*, expanding safety nets, measures to address GBV and SEA, measures to cushion the impact on businesses, increased debt transparency and improved targeting of agricultural subsidies;
- the CERC, US\$15 million under the Uganda Reproductive Maternal and Child Health Services Improvement Project (P155186);
- the COVID-19 Response and Emergency Project (P174041, US\$15.2 million) including Uganda's payout from the Pandemic Emergency Fund;
- a COVID-19 Response Education Project (P174033, US\$14.7 million from Global Partnership for Education, to facilitate remote learning and preparations for school re-opening; and
- an Emergency Desert Locust Response Project (P173702, US\$48 million and P145037, US\$1 million).¹⁹

¹⁷ Exposure as at February 28, 2021

¹⁸ Uganda is among the top ten borrowing countries of TDB.

¹⁹ Delivery refers to bank approval.

32. The World Bank also adjusted the ongoing program to support this response by partial repurposing of the Competitiveness and Enterprise Development Program (P130471) to safeguard tourism assets, adapting the Development Response to Displacement Impacts Project (DRDIP) to protect livelihoods with labor-intensive works, agriculture and small enterprise supports, and shifting resources in the ACDP to address gaps in locust control measures.

B. EVOLUTION OF PARTNERSHIPS AND LEVERAGING

33. The World Bank plays a leading role in promoting development effectiveness in Uganda as co-chair of the Local Development Partners' Group (LDPG) which includes 25 members such as Foreign Commonwealth and Development Office, United States Agency for International Development and the European Union. The LDPG has revived the partnership dialogue on budget processes and informed the FY21 budget allocation to priority programs; supported alignment of development partner efforts with national development plans; held high-level national partnership dialogues; and strengthened performance of sector/program working groups (PWGs).

34. **Trust funds catalyze collaboration among development partners.** The World Bank's portfolio currently includes 83 active global trust fund grants totaling US\$148 million with the majority (80 percent) World Bank executed (see Annex 5). The World Bank manages a country-level Multi-Donor Trust Fund (MDTF – TF073022) to help Uganda achieve a sustainable exit from dependency on aid. Since 2018, the MDTF has attracted more partners, mobilized additional funds, and expanded areas of support, including in: (i) economic governance and fiscal management; (ii) public sector service delivery and constraints to private sector participation; (iii) management of natural and tourism resources, including to address climate change; (iv) community resilience; and (v) private sector development and job creation. This partnership is an increasingly important vehicle for: (i) coordinating strategic responses to national development priorities and thus lowering Government's transaction costs; (ii) deeper donor collaboration; (iii) building the knowledge and evidence base; and more recently, (iv) addressing the impacts of the COVID-19 pandemic.

35. **Enhanced communications efforts and broadened stakeholder engagement contributed to influence the dialogue with the government on priorities and programs for WBG support.** Outreach to parliament, local government authorities, civil society organizations, youth, academia and to the public, via the media, have increased support for WBG supported programs, improved transparency, and contributed to development outcomes. The WBG has implemented an ambitious external communications strategy, enhanced political risk analysis to proactively manage and mitigate reputational risk, and made concerted efforts to mainstream strategic communications and citizen and stakeholder engagement in all operations. The 2018 client survey revealed that the overall stakeholders' views on the WBG are positive, that WBG work helps Uganda achieve development results, and its development priority areas are aligned with what they believe the WBG should focus its resources. Topping the list of priorities is agriculture, health, education, corruption, and jobs, while capacity development, WBG's support to institutional capacity got high level of emphasis.

C. OVERVIEW OF PROGRESS TOWARDS ACHIEVING CPF OBJECTIVES

36. The CPF was appropriately selective with three focus areas, six objectives and two objective-level indicators for each objective. Thematic objectives were pitched higher than project outputs and outcomes as guidance advises, but lower than Uganda's development goals, and with measurements to be drawn from national surveys and databases²⁰. The assessment below considers the achievement of targets in the original results framework and relevant results from additional operations, activities, and indicators.

37. Important results had been achieved in all outcome areas. Multiple challenges have impacted implementation of the CPF requiring the WBG to make frequent adjustments and leading to slower progress than intended towards meeting the program's objectives. Seven of the twelve objective indicators are on track, two are off track, and three indicators are unable to be assessed. Of the 31 supplemental indicators, 14 have already been achieved, eight are on track, and nine are off track or unable to be assessed. (See Annex 3 for detailed Results Monitoring Matrix).

Table 1: Summary of UGANDA FY16-21 CPS Results

Strategic Focus Area A Strengthening governance, accountability & service delivery		Strategic Focus Area B Raising incomes in rural areas		Strategic Focus Area C Boosting inclusive growth in urban areas	
<i>Objective 1: Enhanced economic governance and fiscal management</i>		<i>Objective 3: Increased agricultural commercialization</i>		<i>Objective 5: Improved business environment</i>	
Non-oil domestic revenue (% of GDP, 6 yr annual avg)	On track	Marketed volumes by select commodities (metric tons)	Not rated	Number of businesses with loans registered in the collateral registry	On track
Ratio of average spending per capita between ten best- funded and ten worst-funded districts	Off track	Yields by select crops (metric tons/acre)	On track	Credit to the private sector (billion UGX)	On track
<i>Objective 2: Improved social service delivery</i>		<i>Objective 4: Enhanced resilience of the poor and vulnerable</i>		<i>Objective 6: Improved access to urban services</i>	
Gross enrollment rate, lower secondary school (%)	On track	Household assets (% households sharing at least two basic assets)	Not rated	Urban population with access to clean water (%)	Off track
Deliveries with skilled attendants (%)	On track	Annual rate of forest loss as a proportion of national forest cover (%)	Not rated	Paved roads in fair to good condition (%)	Achieved

²⁰ At the time of CPF approval, focusing country engagement results frameworks on high level objectives was considered good practice, while since then guidance may have shifted toward more specifically tracking operational level indicators. The Independent Evaluation Group (IEG's) 2021 assessment of The World Bank Group Outcome Orientation at the Country Level suggests the former approach. The experience under the Uganda CPF, where despite many changes in context the program has managed to remain focused on and is delivering those higher level objectives, could offer a practical example of how the flexibility and adjustments can be applied in an outcome orientation at the country level.

Objective 1: Enhanced economic governance and fiscal management

38. Prior to the COVID-19 outbreak, the revenue mobilization objective indicator (OI) was on track while the equity of spending outcome indicator remained off track²¹, but there has been recent and notable progress. World Bank-informed tax reforms contributed to an increase in non-oil domestic revenue from a rolling average of 8.8 percent of GDP (2010-15) to 11.6 percent (2014-19) against a target of 13.1 percent (2017-21)²². Total revenues in the first half of FY20 (13.7 percent of GDP) outperformed FY19 outcomes while the share of new firms paying taxes (3.6 percent) already exceeds the 2021 target of 3 percent. In terms of equity of spending, the ratio of average general spending per capita between the ten best-funded and the ten worst-funded districts has shown progress, but neither the health nor the education-related indicator related to equity is currently on track due to the cancellation of the planned DPO series and two-year effectiveness delay of Intergovernmental Fiscal Transfer Project (UglIFT, P160250). UglIFT, financed through a PforR, is taking critical steps to restore and adequacy and equity of financial service delivery, helping to accelerate progress. In 2019/20, budgeted operational funding for schools increased by 25 percent and for health facilities by 43 percent. Improved equitable formulae for conditional non-wage recurrent and conditional development grants in health and education are now being implemented as planned. Average conditional non-wage recurrent grants for education services for the 20 least funded districts increased from UGX 8,303 per child of school-going age in 2018 to UGX 10,528 (or by 27 percent) in 2019, but for health services only from UGX 692 per beneficiary in UGX 2016 to 726 in 2019. *The revised results framework replaces the original indicator (OI2) to capture the critical issue of adequacy of funding for LG services. The original indicator measured equality as distinct from equity.*

39. Public financial transparency has improved significantly, but there is need for more progress on budget execution. Improvements in the credibility of revenue estimates and payroll function are noteworthy. The Ministry of Finance now discloses budget execution data for all MDAs, exceeding a target of 50 percent, with detailed information on financial and non-financial performance. The Government Procurement Portal meets open data standards with more MDAs uploading their procurement data and using the shared public service delivery platform. MoFPED has continued to consistently publish data on total public debt, guarantees, Public Private Partnership (PPPs), contingent liabilities, including from legal proceedings, and domestic arrears. Representing a significant increase, audits now cover almost 37 percent of the value of the national procurement budget and the Bank of Uganda reports on the implementation of external audit recommendations. The percentage of projects in the public investment program underpinned by cost benefit analysis increased from 10 percent (2015) to almost 46 percent (2020) against a target of 60 percent (2021). However, the average deviation of the actual MDAs spending from approved budgets has worsened due to procurement-related delays and stricter safeguard arrangements for Bank-financed projects, and there has been a deterioration in control of payment arrears in tax audits and reconciliation of assets. The approved Public Investment Management (PIM), PPPs and Domestic Resource Mobilization (DRM) Project (P169908) funded under the MDTF aims to further strengthen management and financing of public investments and introduce best practice governance of tax expenditures.

21 This indicator has been revised in the new CPF Results Framework

22 The figures have been revised in tandem with the rebasing of GDP (changing to a new base period to 2016/17 and reweighting) that increased overall GDP between 2016 to 2019 by over 18 percent. Based on these new GDP series, the average moved from 12.1 to 8.8 percent of GDP (2010-15), from 13.2 to 11.6 percent (2014-19) against a lower target of 13.1 (2017-22).

Objective 2: Improved social service delivery

40. With gains realized since 2019, the objective indicator related to education is now on track. After a decade of stagnation, primary school completion rates in Uganda have recently shown improvement. The lower secondary school gross enrollment rate increased from 37 percent in 2015 to 42 percent in 2019. Teacher absenteeism rates – a key determinant of learning – in schools participating in the World Bank-supported Uganda Teacher and School Effectiveness Project (TSEP, P133780) declined from 27 percent in 2017 to 9 in 2019, exceeding the target of 10 percent. The Secondary Education Expansion Project (P166570), currently awaiting effectiveness, aims to enhance equitable access to lower secondary education in underserved areas and for underserved populations. The World Bank-managed Global Partnership for Education COVID-19 Emergency Education Response Project is poised to support continuity of learning and school re-openings.

41. Prior to the COVID-19 outbreak, the health-related objective indicator supported by a series of World Bank-financed investment operations was on track. Deliveries with skilled attendants, targeted under the ongoing URMCHIP operation (P155186) and the previous Health Systems Strengthening (P115563) and Reproductive Health Voucher (P144102) projects, grew from 50 percent in 2015 to 63 in 2019 and is on track to achieve the target of 65 by the end of the CPF period. Between 2012 and 2016, maternal mortality rates declined from 395 deaths per 100,000 live births to 343. The proportion of qualified health workers as measured by “approved posts in public facilities filled by qualified health workers” increased from 56 percent in FY11 to 75 percent in FY19, slightly below the FY20 Health Sector Development Plan target of 80 percent. The percentage of facilities without stock outs of six tracer drugs improved from 64 percent in 2015 to 84 percent in 2019, surpassing the FY20 project target of 76 percent. The East Africa Public Health Laboratories Network Project (EAPHLN P153665) has made excellent progress in strengthening laboratory systems in Uganda, with four satellite laboratories attaining the gold standard ISO 15189 accreditation and another four certified by the African Society for Laboratory Medicine (ASLM), surpassing project targets. These accredited and ASLM certified laboratories are well-positioned to support quality assured COVID-19 testing. This regional project also supported the establishment of the Uganda Tuberculosis Supranational Laboratory (SRL) that serves as a regional and global center of excellence providing technical support to other countries in the region.

42. However, the COVID-19 pandemic and the re-directed focus of the health sector to fight COVID-19 may be putting these achievements at risk. The COVID-19 response has resulted in shortfalls in key health care resources including wages, medicines and supplies, and operational funds. The situation is complicated further by demand side factors such as fear of clients to visit health facilities, reduced household incomes to pay user fees at private facilities, and inadequate information regarding changes in service delivery following adjustments made to accommodate the COVID-response. Between April and June 2020, the coverage of antenatal care, in-facility deliveries, and some immunization services dropped by between 5 and 30 percent compared to the same period in FY19. Similar trends have been seen in malaria, Tuberculosis, and human immunodeficiency virus (HIV) care, as well as for chronic care services. The number of maternal deaths per 100,000 health facility deliveries increased by 7.6 percent, 92 per 100,000 in FY19 to 99 per 100,000 in FY20 (MoH, 2020).

Objective 3: Increased agricultural commercialization

43. Targeted yields for most crops were achieved in 2018 and the growth in income of project beneficiaries, including women participants, has exceeded targets. The Agricultural Technology and Advisory Services Project (ATAAS, P109224) contributed to substantial increases in the yields of maize, rice, cassava and beans in participating areas. Targets for beans, maize and rice were exceeded, while the increase in cassava yields is on track to meet the target in 2021. Net agricultural incomes of project beneficiaries reportedly grew over 200 percent, significantly exceeding targets, and were higher than those of non-beneficiaries growing maize (by 58 percent), rice (by 40 percent), cassava (by 28 percent), and beans (by 400 percent). Over half of the beneficiaries (52 percent) under the ATAAS project were women. Over 94 percent of these reported stronger empowerment in farmers groups; and more than half of participating households reported joint decision making on the purchase, sale and utilization of assets. After facing a long effectiveness delay up to January 2018, the Agricultural Cluster Development Project (ACDP, P145037) reported a 10 percent increase in the production of crops in participating areas, accelerated profiling and registration for e-vouchers from 87,272 to 180,000 farmers from FY19 to FY20, exceeding the target of 100,000 (FY21), and a 120 percent increase in the number of farmers accessing inputs. Among participating farmers, marketed volumes of maize, cassava and coffee are increasing towards targets. National level data, however, is not available. *The revised results framework thus substitutes the original Objective Indicator 5 with an indicator that measures yield increases directly attributable to the project.*

44. A WBG effort to support irrigation and commercialization of farming in Uganda is underway. The Government is currently preparing a comprehensive irrigation masterplan while the ACDP supports the design of new public irrigation schemes focused on medium-scale rice production. The new Irrigation for Climate Resilience Project (ICDP, P163836) will support the development of sustainable irrigation schemes. The IFC is helping to increase private sector participation in irrigated agriculture as well as in value chain development and access to finance for smallholders, cooperatives and farmer groups. The IFC also supported the design of a pilot for farmer-led and micro-scale development to attract private capital, and a sustainable modality combining a subsidy scheme, farmers contributions, and credit to crowd in private sector investors and scale the impact on beneficiaries.

45. The World Bank is also contributing to improving land management. The Uganda Economic Update#6(2015) recommended accelerating systematic land registration and strengthening institutions for land administration management; and the Competitiveness and Enterprise Development Project (P130471) piloted the systematic registration of communal and individually owned land. The Uganda Support to Municipal Infrastructure Development Project Additional Financing (USMID-AF, P117876) is focused on strengthening land tenure security in refugee hosting districts. The percentage of rural land registered increased from 5 percent in 2014 to 10.8 percent in 2019, exceeding the 10 percent target (2021), although the indicator cannot yet be tracked by gender.

Objective 4: Enhanced resilience of the poor and vulnerable.²³

46. The key objective indicators under Objective 4 face data availability issues and results are challenged by program delays, but there has been good progress on the supplementary indicators. Asset ownership remains low among poor households, except for housing (92 percent own a house) and land (48 percent).²⁴ Concerns about data availability and quality, however, prevent a robust assessment of progress towards improved well-being. *Given the lack of reliable data, the revised results framework replaces the original objective indicator 7 with one that measures the change in percentage of vulnerable households as measured by the Uganda National Panel Survey and a target value that reflects efforts asset ownership from decreasing in the wake of COVID-19.*

47. Efforts to stem the decline of forest cover (through electricity access, land management and conservation efforts) to mitigate climate-related vulnerabilities have yet to see notable impact given implementation delays. The share of households with access to electricity increased from 15 percent in 2013 to 42 percent in FY20, exceeding the 20 percent target (2021)²⁵. By November 2020, the Uganda Energy for Rural Transformation III Project (P133312) had connected 155,625 households to the grid against a target of 150,000 (December 2020). However, implementation delays confront the Grid Expansion and Reinforcement Project (P133305), and the transmission lines completed under the Electricity Sector Development Project (P119737) have not yet been energized. The proposed Energy Access Scale-up Project (P166685) will continue expanding access to electricity, including for refugee and host communities. A national water information system supported under the Integrated Water Management and Development Project (IWMDP, P163782), declared effective in June 2019, is yet to be established. The Investing in Forests and Protected Areas for Climate Smart Development Project (P170466), approved in April 2020, will support the development and implementation of resilient landscapes programs for key catchment areas. *The revised results matrix replaces the problematic forest cover objective indicator 8 with the corporate indicator measuring land area under sustainable landscape management practices.*

48. Social protection efforts in targeted areas are yielding results. The Northern Uganda Social Action Fund 3 (NUSAF3, P149965) project had created over 22.5 million person-days of empowerment through labor-intensive public works (LIPW) and built 3,240 community assets in participating districts in Northern Uganda and Karamoja by December 2020. More than 584,000 households comprising about 2.9 million people, of which over 50 percent are female, have benefited from safety net programs such as cash transfers, case-for-work, food-for-work and public works. The Development Response to Displacement Impact Project (DRDIP, P152822) has provided almost 2.5 million refugees and host community members with access to social and economic services and infrastructure (53 percent of whom are female), and introduced the Displacement Crisis Response Mechanism – a global innovation – for financing rapid scale-up of service delivery in response to future inflows.

23 The objective indicators are not rated as data is not available; most of the milestone targets have been achieved and additional efforts to support this objective are yielding positive results.

24 2016/17 UNHS.

25 Uganda Bureau of Statistics

Objective 5: Improved business environment

49. Indicators to measure the number of businesses with loans registered in the collateral registry and credit to the private sector are both on track. Since being rolled out in September 2019, over 4,600 businesses (12.3 percent of which are owned by women) have registered, using motor vehicles, motorcycles and other assets to secure loans for investments in areas such as transport, agriculture, accommodations, real estate, health and education. Also supported under the Competitiveness and Enterprise Development Program (CEDP, P130471), the time and cost to register a business have decreased significantly, exceeding targets. Of the total number of borrowers (4,659), 86 MSMEs were able to access loans. Overall, credit to the private sector increased from 6.63 billion UGX (2014) to 15.09 billion UGX (2019) and is on track to meet the target of 20 billion UGX (2022). Supplemental indicators related to land registration show mixed progress. The number of days to register land has achieved its target of 25 and by FY22 the urban land registration will also be disaggregated by gender. Also contributing to the improved business environment, the length of power transmission lines totals over 2,900 km, exceeding the target of 2,035 km. The participation of employers in skills training programs supported by the Skills Development Project (P145309) has increased from 82.5 percent (2017/18) to 86 percent (2018/19) and is on track to meet its target.

Objective 6: Improved access to urban services

50. Progress in urban areas is mixed; road conditions and transport planning have improved, and electricity consumers have increased, but indicators related to access to clean water and safe sludge and wastewater disposal are off track. The percentage of the urban population with access to clean water appears to have declined (from a baseline of 73 percent in 2015 to 70 percent in 2018) due to the faster rate of urbanization and administrative changes which complicates data accuracy. The Water and Sector Performance Report 2019 reports that the urban population using improved drinking water sources increased from 77 percent in June 2018 to 79 percent in June 2019. Results from the Integrated Water Management and Development Project (P163782), declared effective in June 2019, have not yet been realized, and the number of towns with access to safe sludge and wastewater disposal increased only marginally from 30 to 32 between 2014 and 2018. Urban infrastructure planning is being enhanced with the percentage of towns with urban physical development plans increasing from 40 in 2014 to 61 in 2018 and is on track to reach the target of 70 by 2021. The percentage of paved roads in fair to good condition in municipalities has exceeded the target. In Kampala, 70 percent of roads are in fair to good condition, on track to meet the target of 74 percent (2021) although the Second Kampala Infrastructure and Development Project (P133590) has delivered only 37 km of paved roads to date, well short of the target of 85 km. The number of people in urban areas with access to all-season roads within a 500-meter range totaled over 1.5 million (November 2019), exceeding the target of 1.05 million (December 2019). With IFC support through two financing rounds to support investments in distribution via Umeme Ltd, the number of electricity consumers in urban areas increased substantially from 950,814 in 2015 to 1.526 m in June 2020.

D. EMERGING LESSONS

51. The following key lessons emerging from implementation experience have informed the proposed adjustments to the current CPF and will help to shape the preparation of the new CPF:

52. **Investing in social risk management pays off in better and more sustainable outcomes.** As described above (para 20), the CPF period was marked by safeguard-related challenges. Inspection Panel requests and subsequent investigations documented weaknesses in managing social risks in large infrastructure projects and in contract management. These findings have led to a greater understanding of broader social risks in Uganda, strengthened safeguards management by both Government and the World Bank, and made stronger and more systematic the focus on compliance. In addition, the World Bank is increasingly promoting culturally sensitive approaches to difficult social inclusions issues and has advanced from a “do no harm” perspective to enhancing environmental and social results in project design. Social risk management has also provided an additional entry point for dialogue on women’s empowerment and girls’ development, including for refugee households who are particularly vulnerable.

53. **Flexible, creative, and practical responses can help to bridge challenging political dynamics and deliver results.** The WBG relationship in Uganda has been challenged by the authorities’ preference to channel development finance more toward infrastructure than social service delivery, increasingly centralized decision-making, and emerging weaknesses in governance (para 7). However, innovative solutions have helped to close the gaps and deliver results without damaging the client- World Bank relationship. These innovative approaches, which will be continued, include:

- **Broadening partnerships** across government entities, developing institutional capacity of local agencies, enhancing citizen engagement through targeted stakeholder consultations, and deeper collaboration with development partners which have combined to build strong coalitions focused on service delivery.
- **Financing health and education infrastructure and services** through results-based approaches that strengthen the link between performance and financing aim to address the adequacy of local government financing and regional inequities in government spending (e.g., through Uganda Intergovernmental Fiscal Transfers Program (UgIFT) Program-for-Results Financing P4R).
- **Strategic use of trust funds and ASAs** to advance the policy reform agenda helping to compensate for delays in, and build the case for, future development policy lending.
- **Mitigating exposure to corrupt practices and weak governance** through a Memorandum of Understanding with the Inspectorate of Government.
- **Approaching women’s empowerment** as strengthening the potential of Ugandan women to contribute to the broader development agenda.

54. **Crises can clarify priorities, catalyze collaborative responses, and build resilience.** Uganda’s response to the COVID-19 pandemic has significantly benefited from previous experience with Ebola and other epidemic outbreaks in the last few years (para 22). Despite its challenges, Uganda has become a regional leader in outbreak preparedness and response, providing technical support to other countries. Similarly, the refugee crisis has brought government and its partners together to mobilize a

highly progressive response that has had important spillovers for Uganda's development. Key factors to this success include: strong alignment and coordination between international, government, development and humanitarian responses; availability of IDA resources that could be used within the existing pipeline; and a multi-sectoral and holistic approach to economic opportunities and access to services for both refugees and host communities. Similar factors are now influencing the response to COVID-19 pandemic and Desert Locust invasion.

55. Investing in fewer, larger projects has the potential to yield more transformative impact. During most of the CPF period, strategic use of project closings and additional financings were combined to consolidate the World Bank portfolio. (para 25) and allowed for a sharper strategic focus, greater synergies in approach, more efficient management of effectiveness and implementation delays. In addition, the option to devote more resources to scale up successful interventions, e.g. through the performance based, more wholesale rollout of agricultural innovations, has delivered much stronger results in terms of a widespread increase in yields that earlier more fragmented operations.

56. A strategic and concerted communications effort promotes learning, building relationships, engenders buy-in, and helps to mitigate reputational risks. The WBG in Uganda used a variety of media and forums to deliver its messages and receive feedback and otherwise engage with a wide range of stakeholders inside and outside of government. The development of the CPF and the SCD were underpinned by a robust communication strategy including wide stakeholder consultations that identified key priorities of the program focus, promoted better understanding of WBG-supported operations and approaches, built consensus and support for policy reforms strengthened participatory development models that have enhanced transparency in project-supported activities. Various outreach strategies and tools²⁶ have been employed to target and engage stakeholders, including project beneficiaries to collect actionable feedback on key issues related to Bank support. This ensured that project designs remained responsive to local demand and that progress was tracked in real-time and risks managed appropriately. While Uganda has delivered quality communication activities, it can draw lessons from DR Congo whose sustained engagement of stakeholders that have significantly contributed to successful cross-cutting reforms garnering broad community support, from Kenya where communication measures have strengthened participatory development models and enhanced transparency in project-supported activities, from Moldova where intensive policy dialogue and a dynamic external communications strategy is regarded as contributor to Bank Group's overall good performance and from Ghana and Nigeria on sustaining efforts including mainstreaming this systematically through all projects as part of the project implementation to increase more ownership, strengthen community participation and engagement to enhance transparency and greater accountability of duty bearers. The WBG will continue to streamline its communications and systematically engage with stakeholders, including citizens.

²⁶ Regular dialogue with client, parliament, CSOs, youth, townhalls upcountry, analytical disseminations, and wide sharing of multi-media information and educational material to share results, lessons learned and invite feedback. Comms is part of the issues and complaints management, including inspection panel processes.

4. ADJUSTMENTS TO THE COUNTRY PARTNERSHIP FRAMEWORK

57. The CPF's focus areas and objectives remain relevant to Uganda's NDP III, IDA19 priorities and WBG COVID-19 Crisis Response Approach Paper and continue to provide the framework for the country program. The adjustments to the CPF program focus on the delivery of crisis response efforts and investments to support a strong recovery and to lay the foundation for a more resilient society. Focus Area A on strengthening governance, accountability and service delivery covers both the immediate crisis response in the social services and governance reforms for a stronger recovery. Focus Area B, which aims to increase rural incomes, focuses both on household and climate resilience especially for vulnerable and poor households, while paving the way for a stronger recovery through a more productive and market-driven agriculture sector. Similarly, Focus Area C, focused on inclusive growth in urban areas, includes support for urban space to face climate challenges and the business environment for private sector recovery.

58. This PLR also extends the Uganda CPF to FY22 in line with the WBG's COVID-19 Crisis Response Approach Paper to allow for the development of a new CPF under more steady conditions. This one-year extension straddles the recent election period in January 2021, allows time for agreed results to materialize, and accommodates any delay in the implementation of the NDP III Program-based approach and adjustments to the emerging post-COVID-19 strategy. The new CPF will be informed by an upcoming Systematic Country Diagnostic update (FY21), the results of a new poverty survey (FY21) and a Completion and Learning Review of the CPF.

A. ADJUSTMENTS TO THE CPF PROGRAM (SEE ANNEX 5)

59. In addition to the program adjustments detailed above, the Bank WBG is supporting Uganda to create opportunities for a stronger recovery and lay the foundations for a more resilient society. Results from these additional efforts will be mostly realized in the next CPF period. Support focuses on:

- **Consolidating the Government's burgeoning attention to human capital with policy dialogue and investments in education, social protection, and health care, and capitalizing on recent challenges to elevate the dialogue on women's empowerment and girls' development.** Additional performance-based financing to the UglIFT (P172868) will continue to buttress social spending and improve service delivery in health and education including COVID-19 vaccines at the local level. The national deployment and vaccination plan (NDVP) for Uganda plans to vaccinate up to 49.6 percent (about 22 million people) of the population aged 18 years and above in a phased manner. The country launched the vaccination on March 10, 2021 with a focus on the following groups in phase 1: health workers, teachers, and people aged 70 years and above. The following phase will target people with comorbidities, those aged 50 years and above and other essential personnel. The first 20 percent of the population will be covered by vaccines donated through the Covax Facility for free (phase I) while the remaining 29.6 percent of

the population will be financed either through domestic resources, contributions from partners and out of the pocket in phase II and III. As of March 30, 2021, about 50,000 people had been vaccinated and the government hopes to reach all the targeted population by the first half of 2022. A new agricultural investment focused on nutrition is planned for FY22 and the CPF will continue to expand analytical work and policy dialogue on women's empowerment and girls' development toward new financial programming. Although reform prior actions in the abovementioned emergency DPO strengthened some safety nets, delayed follow-up appears to have reduced the intended impact on beneficiaries, suggesting that the World Bank program should continue to focus attention and support on these and broader human capital development challenges.

- **Supporting a more robust economic recovery, the Government's priorities for the World Bank are to focus on job creation with digital transformation and access to electricity as key enablers.** In addition to operations in these areas – the Digital Acceleration Program (P171305, FY21) and the Electricity Access Scale up (P166685) – the World Bank will invest in improving the productivity of small-holder farmers through the Irrigation for Climate Resilience Project (P163836, FY20) and the Climate Smart Agriculture and Agribusiness Development Project (P173296, FY22), and assist the recovery and development of micro, small and medium enterprises (MSMEs) with access to finance through the investment for Industrial Transformation and Investment Program (P171607, FY21) and through MIGA's support to the regional Trade and Development Bank that services COMESA region.
- **Strengthening resilience to climate change adaptation and improved natural resource management,** the CPF program now includes the Investing in Forests and Protected Areas for Climate-Smart Development Project (P170466) to improve sustainable land management and increased benefits to forest-dependent communities, including through tourism development, the abovementioned irrigation and climate smart agriculture programs and the Greater Kampala Metropolitan Development Program (FY22) to strengthen resilience in the urban landscape.
- **Finally, the CPF program will continue to support Uganda as it continues to host large refugee populations by investing in host communities and strengthening service delivery.** The program includes both targeted investments, but also mainstreams host and refugee community investments in most of the operations in the portfolio, funded through the IDA18 Refugee Support Window and the IDA19 Host Community Window.

Table 2: FY20-FY22 Actual and Planned IDA Financing (US\$ millions)

B. ADJUSTMENTS TO THE CPF RESULTS FRAMEWORK

60. The CPF results framework has been adjusted to better capture program results to be achieved during the extended program period. The revised framework: (i) revises objective indicators as necessary to ensure realism and viability of assessing achievement, particularly where data is unavailable; (ii) adds an objective indicator to capture results from the significant support for refugee and host communities; (iii) adjusts targets to reflect the impact of COVID-19 as well as the extension period; and (iv) identifies data sources for all indicators. See Annex 1 for a revised results framework and Annex 3 for a detailed summary of the adjustments made.

C. ADJUSTMENTS TO THE CPF IMPLEMENTATION MECHANISMS

61. The CPF program will continue the gradual transition to larger, more transformational operations complemented by measures to strengthen governance and reduce fiduciary risks. Recent project designs are focused on scaling up the successful approaches demonstrated by earlier projects, for example, NUSAF3 efforts to expand safety nets. The program is also expanding the use of PforRs to strengthen the link between financing and outcomes, and to apply the incentive framework for channeling the domestic resources toward service delivery at the local level. To ensure continued improvements in governance and fiduciary performance, the Bank has engaged the Inspectorate General to strengthen accountability within Bank projects and is working with other development partners on broad reforms of public financial management (PFM) and country procurement systems.

62. The CPF program will continue the increased efforts to improve social risk management, protect and ensure equal access by vulnerable groups, and focus on empowering women and girls. As outlined above (para 20), 16 projects were retrofitted for improved prevention and management of GBV/SEA issues. Building on the work to date, a new ASA will also help map GBV/SEA services in refugee hosting districts to address key gaps. The Government is proactively responding to any environmental and social incidents on WBG supported operations, including active use of work and other stoppages. Measures have been put in place to prevent identity-based exclusion from access to WBG-financed services and opportunities while broadening the dialogue on inclusiveness and the protection of vulnerable groups. A renewed dialogue on women's empowerment and girls' development is expected to yield future lending in this area.

5. RISKS TO THE CPF PROGRAM

63. The overall risk²⁷ to the achievement of CPF goals remains substantial despite strong results to date and the short period remaining, due to the extreme uncertainties posed by the COVID-19 pandemic on the economic and social outcomes, and by the heightened social tensions in Uganda. The macroeconomic risk has been raised from moderate to High; risks related to the political and governance, sector policies, institutional capacity, fiduciary management, and social and environmental issues remain substantial or high. Relevant targets in the results framework have been recalibrated to include a likely slowdown in key development gains impacted by COVID-19, but significant uncertainties remain.

64. Political and governance risks to the program remain Substantial. Heightened political activity in the run up to 2021 elections diverted attention from development challenges, which may persist if social tensions are protracted. The demands of the COVID-19 response have decreased discretionary fiscal space while drawing increased public scrutiny to the details of crisis spending. The CPF program avoided programming new operations during and immediately following the election. To mitigate broader and persistent governance challenges, including increasing centralization of decision-making and corruption, the CPF program will continue to help deepen technical capacities in central and local government, enhance citizen engagement to strengthen accountability, and support digitalization of government services.

65. Macroeconomic risks to the CPF program have been upgraded to High. Although Uganda's growth projections remain positive, there is considerable uncertainty ahead. Uganda has a record of sound macroeconomic policy adjustments, but there are downside risks of a protracted pandemic or global recession, further restrictions that disrupt domestic activity, and fiscal slippages. The upcoming (FY21) debt sustainability analysis could raise Uganda's risk of debt distress. Efforts to safeguard fiscal sustainability will be needed to mitigate these risks. The IMF has recently reengaged in Uganda with the delivery of a COVID-19 Rapid Response Facility in May 2020, while World Bank continues to support improvements in the governance of tax expenditures, local government revenue mobilization, and the efficiency of revenue administration.

66. The risk related to sector strategies and policies reduced to Moderate. Building on progress already achieved, the CPF continues to aim at expanding the Uganda's programming toward core IDA priorities, including gender equity, social inclusion, and human capital. Policy dialogue, innovative programming (and emerging results), and strategic ASA are helping to find areas of agreement, including those that have emerged during recent crises.

67. The risk of institutional capacity for implementation and sustainability is Moderate. To mitigate the impact of Uganda's capacity deficits, institutional weaknesses, and highly centralized decision-

²⁷ Table 3

making on program implementation, the WBG has increasingly involved a wider range of authorities earlier in project preparation and has strengthened engagement with and capacity development of agencies below the central government level.

68. The fiduciary risk remains Substantial. Weaknesses in PIM and efficiency of public procurement continue to affect delivery of the program. However, good practices are emerging in internal and external audit and Government is steadily strengthening PIM and procurement with World Bank support.

69. Environmental and social risks remain High. The Uganda program has suffered from weak management of and insufficient attention to environment and social risks, particularly on infrastructure projects with serious consequences for program implementation. Difficult lessons have been internalized with significant progress in (i) risk management and early response across the portfolio both on the World Bank and government sides, (ii) institutional strengthening and capacity building; and (iii) a comprehensive approach to Stakeholder Engagement Plans to ensure more inclusive, two-way feedback between beneficiaries and other stakeholders. Nevertheless, risks remain high and will continue to need close attention and further capacity building.

70. Stakeholder risk remains Substantial. Ambitious communications and stakeholder engagement efforts have helped to reset the dialogue with government and key stakeholders, including civil society organizations, academia, media, and the broader public. The heightened transparency achieved has helped to increase support for the WBG. Streamlined communications, early and consistent engagement, and enhanced political economy analysis will continue to help manage and mitigate reputational risk.

Table 3: Revised Systematic Operations Risk-rating Tool (SORT)

Risk	CPF Rating (FY16)	PLR Rating (FY20)
Political and governance	Substantial	Substantial
Macroeconomic	Moderate	High
Sector strategies and policies	Substantial	Moderate
Technical design	Moderate	Moderate
Institutional capacity	High	Moderate
Fiduciary	Substantial	Substantial
Environmental and social	High	High
Stakeholders	Moderate	Substantial
Overall	Substantial	Substantial

6. ANNEXES

Annex 1: Updated CPF Results Framework

Strategic Focus Area A: Strengthening governance, accountability, and service delivery

All CPF objectives complement proposed improvements in social service delivery and improved governance, management, and accountability for public resources, which will accelerate poverty reduction and boost shared prosperity. While improvements in health and education are important, migrants to urban areas need strong human capital development to be able to access better jobs that will be created over the medium term. Good health and education would also empower women to access opportunity in a growing Ugandan economy. Increasing economic growth and tax revenue while efficiently allocating and spending resources will maximize the poverty impact and boost shared prosperity.

CPF Objective 1: Enhanced economic governance and fiscal management

Intervention Logic: The public sector should become more effective in using public resources by closing the policy implementation gap to help Uganda accelerate poverty reduction. This requires four primary changes: (i) increasing revenues to expand the fiscal space to finance infrastructure and social service needs; (ii) improving the allocation of resources both between sectors and levels of government; (iii) preparing for the effective management of future oil revenues and improving debt management; (iv) enhancing expenditure management through improved PFM; and (v) improving efficiency of public investment management, including procurement management. This needs to be complemented by strengthening country systems for transparency, participation. This objective contributes to Sustainable Development Goals (SDGs) 8, 10, and 16.

Therefore, the WBG will support Uganda through a series of interventions and ASAs to enhance revenue at the central and the sub-national level, including efficiency of resource allocation, using poverty maps and analysis to target the poor. This will be supported by lending operations with strong sector content that will seek to improve resource allocation for service delivery to local governments and enhance transparency and accountability. In addition, an investment project will focus on statistical capacity building to close systematic gaps as well as those within the priority areas covered by the CPF. On enhancing expenditure management, the World Bank will design a results-based operation aimed at improving the use of public financial and procurement management systems; making budget planning and execution more transparent, reducing procurement delays while enhancing integrity respectively; and improving the sanctions regime. The operation will complement reforms to enhance citizen engagement using social accountability mechanisms. The WBG will continue the technical assistance to the implementation of the debt management strategy; and continue the mandatory debt sustainability assessments jointly with the IMF, especially in the context of future oil flows.

Challenges: While support for formal changes in policies has been strong in recent years, enthusiasm has flagged during the implementation phase. There is also a risk that vested interests of different stakeholder's delay reforms, and that the government will continue to find it difficult to translate important policy reforms into practical implementation.

CPF Objective indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
Objective Indicator 1: Non-oil domestic revenue (% of GDP, 6 yrs annual avg) Baseline: 8.8 (2010-15) avg* Target: 13.1 (2017-22) avg* Source: Ugandan authorities; WB and IMF staff estimates * Note: these values reflect the reweighted and rebased GDP (2016/17) and consider projected impact from Covid-19. CPF Objective 2: Improved social service delivery

Intervention Logic: Much of Uganda's inclusive development in the short and longer terms critically depends on helping people develop capacities to become self-reliant and productive participants in Uganda society. The Human capital Index for Uganda indicates a child born in Uganda today will only be 38 percent as productive as she could be if she had completed education and maintained full health when growing up; which ranks the country 137 out of 157 on the HCI. To seize opportunities people must have a basic level of health, knowledge, and skills. The Government's primary role in this process is to provide the foundations of primary healthcare services and basic education. Health services would include services that address the triple burden of reproductive maternal, newborn, child and adolescent health conditions and malnutrition; infectious diseases such as malaria; and non-communicable disease that are becoming prevalent. Basic education services would focus on providing children and adults a full cycle of education with skills and cognitive development to tap into labor market opportunities. Addressing under-nutrition would help to improve health and learning outcomes, and enhance productivity thereby contributing to sustained and equitable economic growth.

In primary education, access is nearly universal, but quality is variable and many students, particularly from poorer households, dropout before completion. Access to secondary education is limited, and financing remains inefficient. These shortcomings are particularly prominent in the North and East of the country. With the closures of schools due to COVID-19 the inequalities in access to education have widened further and will have an impact on the learning outcomes. The World Bank will continue to implement its investment in improving quality and equity of primary education by, among others, improving teacher effectiveness, school level accountability systems, and focusing on schools in rural areas, including measures to prevent sexual and gender-based violence (a common cause of school dropouts amongst girls) against children both in and out of schools. A new project will focus on increasing access to and quality of secondary education including refugee children. Of importance is progression and retention of girls in secondary school to expand their education and labor market opportunities and indirectly slow population growth. Finally, the World Bank will continue ongoing work in skills development by supporting high quality and demand driven skills training in key growth sectors (oil and gas, agriculture & construction) Given Uganda's young population the World Bank will likely support a new operation on youth employment to help Ugandans become more employable as the labor market evolves.

The underlying challenges facing the health sector and constraining its performance arise from the high disease burden (the majority of which is preventable) and under-resourcing, coupled with ineffective and inefficient deployment of human resources, medicines, equipment and infrastructure. Low management and operational capacity in the cities, local governments and health facilities dampen the capacity of these entities to deliver high quality health services required to achieve universal health coverage objectives. As a result, coverage of several key programs is suboptimal, and furthermore, there is significant regional variation in coverage and quality of care. World Bank support Government centers on strengthening health systems and infrastructure, improving incentives for health providers, and increasing the results focus of the Government's health programs. Other partners will focus their efforts on disease prevention, including for specific diseases and through more general approaches including hygiene and water. In both health and education, the World Bank will help the government support both public and private sector provision of services. This objective contributes to SDGs 3, 4, 5, and 10.

Challenges: Government financing of health and education has been declining as a share of the budget and of GDP, and given the rapidly growing population and government policies to provide free basic health and education services, adequate resourcing of the sector is important to ensure adequate access to and quality of services. This ultimately reflects as severe shortage of critical resourcing including staffing, infrastructure, equipment, materials/medicines and low level of motivation among service providers (facilities and personnel), a situation that has been accentuated by proliferation of districts and high population growth rate unmatched by resource allocation.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
Objective indicator 3: Gross enrollment rate, lower secondary school (%) Baseline: 37 (2015) Target: 47 (2022) % of which are girls Baseline: 34 (2015) Target: 45 (2022) <i>Source: Education Management Information System (EMIS)</i> Note: GER for lower secondary is calculated by number of students enrolled in S1-S4, as a % of all children 13-16 years old.	Primary school completion rate (% of which girls) Baseline: 63 (64 are girls) (2015/16) Target: 65 (65 are girls) 33 (2021/22) <i>Source: UBOS (population data and projections); EMIS for P7 completion</i> Note: Primary completion rates are calculated by number of children in relevant age group who have completed the last grade of primary level (P7), i.e., the number of students registered for end of cycle exams, as a % of the total population of the same age group. Strategic Focus Area B: Raising incomes in rural areas

In the short to medium term, there is great opportunity in Uganda for rural development and increases in income in rural areas, which will lead directly to robust poverty reduction. Growth in agriculture has had a strong impact on poverty in recent years. The livelihoods of more than four in five Ugandans are dependent on income from agriculture. But compared to neighboring countries, agricultural growth has been slow, productivity is low, and entire regions of the country have largely been excluded. Variability in income due to external shocks leaves many families vulnerable to falling back into extreme poverty even after they had initially escaped it.

CPF Objective 3: Increased agricultural commercialization

Intervention logic: Growth in the agriculture sector requires higher agricultural productivity and increased commercialization, given the limited remaining potential for expansion of cultivated land, and the unpredictability of weather and prices. The WBG program takes a broad approach to boosting productivity and increasing commercialization, including interventions in many sectors that will encourage farmers to invest in their land. Constraints brought on by COVID-19 are likely to impact land area cultivated, agricultural productivity due to low production, reduce household incomes and increase the risk of food insecurity. The program will tackle access to and security of land and access to finance, so farmers have the capacity to invest. It will support improved extension services, so farmers have the right information to invest and to adopt sustainable farming practices using high quality agricultural inputs. The program will mitigate the impacts of climate change manifested in new pests and diseases, case in point being the Fall Army Worm (2017) a new pest on both cereal and grain crops, as well as new diseases such as Cassava Brown Streak Disease (2016), and more recently, the Desert Locust invasion of 2020 that threatened to reverse productivity increases, all of which require investments in research for control measures. And it will help farmers capture economies of scale, including through associations and commercialization. The program will also help farmers get better prices, creating the incentive to invest. This will include strengthening value chain coordination in agribusiness and providing better price information and storage solutions so farmers can reduce post-harvest losses, sell when prices are attractive, and face lower transport costs to markets. As observed by the SCD, given current income levels, the high share of income going to consumption, and the relatively closed economy, an increase in income can produce large multiplier effects. Key indicators are both yields and marketed volumes of selected crops. These will show both that farmers are producing more, and that they are receiving a return on their investment and labor by getting their product to market. This objective contributes to SDGs 1, 2, 7, 8, 9, and 10.

Challenges: First, strategic and policy uncertainty combined with capacity constraints in Ministry of Agriculture, Animal Industry and Fisheries have hampered progress on previous direct support to the agriculture sector. Second, there is a time lag between land registration, access to finance, and greater investment by farmers, suggesting increased productivity through this lever may not begin until the end of the CPF period. Third, the agriculture sector has a track record of slow implementation. Fourth, the dependence on rain-fed agriculture and volatile commodity prices makes yields and productivity highly sensitive to climate and external conditions. Fourth, ultimately agricultural productivity will continue to rely heavily on weather conditions and associated pests and diseases necessitating development of early warning capabilities.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
(Revised) Objective Indicator 5: Percentage increase of marketed produce for maize, rice, beans, cassava, and coffee by participating ACCEs in project area. Baseline (2016): 0 Target (2022): 60 Source: ACDP M&E Note: Aggregate values composed of: Maize: 0 (2018) [8.2 MT], Target: 60 (2022), Actual: 40 (2019) [11.48 MT] Beans: 0 (2018) [3.4 MT], Target: 60 (2022), Actual: 79 (2019) [6.09 MT] Rice: 0 (2018) [17.8 MT], Target: 60 (2022), Actual: 72 (2019) [30.6 MT] Cassava: 0 (2018) [22.8 MT], Target: 60 (2022), Actual: 21 (2019) [27.6 MT] Coffee: 0 (2018) [23 MT], Target: 60 (2022), Actual: 12 (2019) [25.8 MT] Objective Indicator 6: Yields by select crops (metric tons/acre) Baseline (2016): Beans: 0.65 Cassava: 8.75 Maize: 1.49 Rice: 1.07 Coffee: 1.05 Target (2022): Beans: 1.75 Cassava: 25 Maize: 4.0 Rice: 3.0 Coffee: 1.5 Source: Impact Evaluation of ATAAS Project; ACDP ISR	Number of irrigation schemes designed Baseline: 0 (2016) Target: 5 (2022) Source: ACDP ISR Number of farmer organizations undertaking collective action (input and product marketing) Baseline: 98 (2016) Target: 300 (2022) Source: ACDP MIS (M&E team) Farmers reached with agricultural inputs and services through e-voucher schemes Baseline: 0 (2016) Target: 100,000 (2022) Source: ACDP MIS Rural land registered (%) Baseline: 5 (2014) Target: 12 (2022) Source: MLHUD report manual registration of property Gender disaggregated data on rural land registration available Baseline: no (2016) Target: yes (2022) Source: MLHUD report manual registration of property (New) Number of farmers reached as consumers of fertilizers Baseline: 10,000 (2018) Target: 80,000 (2021) 140,000 (2022) 200,000 (2023) Source: Grain Pulse Farmer Extension Project (IFC)	Closed: IPF: Agricultural Technology & Advisory Services IPF: Regional Pastoral Livelihoods Resilience Project IPF: East Africa Agricultural Productivity (regional) IPF: North Eastern Road Corridor Asset Management Project IPF: Energy Sector Development Project IPF: Energy for Rural Transformation II IPF: Energy for Rural Transformation III IPF: Skills Development Project IFC: Investment in Pearl Dairy ASA: Closing the Potential -Performance Divide in Ugandan Agriculture ASA: Uganda Agriculture Sector Public Expenditure Review ASA: Capacity Needs Assessment for Improving Agricultural Statistics in Uganda ASA: Unlocking Agricultural Finance and Insurance in Uganda Ongoing: IPF: Competitive & Enterprise Development Project AF (FY20) ASA: Technical Evaluation of the e-voucher Input Subsidy Program in Uganda (FY21) IPF: Agriculture Cluster Development Project IPF: Grid Expansion and Reinforcement (FY16) IPF: Development Response to Displacement Impacts (regional) (FY16) IPF: Great Lakes Trade Facilitation (regional) (FY16) IPF: Investing in Forests and Protected Areas for Climate Smart Development (FY20) IPF: Emergency Desert Locusts Response Project (FY20) IFC: Grain Pulse Farmer Extension (FY21)

CPF Objective 4: Enhanced resilience of the poor and vulnerable

Intervention logic: Even as agricultural productivity increases, people in rural areas are increasingly vulnerable to long-term degradation of natural resources, droughts, and volatility in farm-gate prices. Indeed, in recent years, for every three people to rise out of poverty, two have fallen back into poverty. Mitigation of shocks—by helping people who face them, and building up household and community assets, which increase resilience to shocks - is essential to stability and to reducing vulnerability.

The World Bank will support Uganda in expanding its system of safety nets, focused in particular on the vulnerable Northern region, to help those already in poverty and those who have fallen back into poverty and build resilience, mitigate risks and support vulnerable households to invest in human capital especially in times of shocks such as COVID-19 and climate-related. It will also support those communities hosting refugees displaced from conflicts in neighboring countries, and help the government protect vulnerable groups through improved social risk management, including prevention of sexual and GBV related to infrastructure development and public works, which accounts for a large share of WBG activities. In addition, the World Bank will support social development dialogue and client capacity building to increase inclusion, sustainability, transparency, and accountability in development-induced land acquisition. For water for production, the World Bank will support the government's development of integrated water resources management plans for key catchments and invest in monitoring and information systems for sustainable water flows and water for production including expanding the use of irrigation to mitigate against droughts.

Investments in water for production will be made late in the CPF period, so results will only become apparent during the following CPF cycle. Support to farmers will include a shift to 'climate smart' agriculture. The World Bank will also support investments in the environment and natural resources, including projects in forests and climate adaptation, to help preserve the eco-system on which Ugandan livelihoods depend. This objective contributes to SDGs 6, 13, and 15.

Challenges: Difficulties in targeting safety net support to the poorest, balancing expanded water production with water resources management, and the employability of potential workers in rural areas. Furthermore, the agriculture value chain is currently not adequately developed to generate enough off-farm employment and the renewable natural resource base is becoming rapidly degraded.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
(Revised) Objective indicator 7: Vulnerable households (% national) Baseline: 49 (2016) Target: 48 (2022) Actual: 48 (2018-2019) Source: Uganda National Panel Survey (UNPS) Note: Indicator is designed to measure vulnerability and a HH is considered vulnerable if it fills any of the following criteria: (i) Being poor (under national poverty line), (ii) Used suboptimal coping strategy for any from 18 possible shocks hit the household during last 12 month (changed dietary pattern, sold assets, sold building, sold animals, sent children to live somewhere and reduced expenditure on health and education; (iii) At least one household member does not have two set of clothes, (iv) At least one household member does not have a pair of shoes; (v) Household did not have enough food to feed the household in the last 12 months (Revised) Objective Indicator 8: Land area under sustainable landscape management practices (ha) Baseline: 0 (2020) Target: 0.9 m or 1.27 m (2022) Source: Investing in Forests and Protected Areas for Climate Smart Development Project ISR, Integrated Water Management development Project (IWMDP), Irrigation for Climate resilience Project. Note: 550,000 ha (IWMDP), 38,000 ha (Irrigation for Climate Resilience Project), 1.27 mil ha (Forest and Protected areas) and (ACDP) (New) Objective Indicator 9: Refugees and host community members with access to social and economic services and infrastructure (of which 50% are female) Baseline: 0 (2016) Target: 2,900,000 (2022) Source: DRDIP ISR; PIU for % female. Note: Actual as of May 2020 was 2,463,382 (53% female).	Number of districts in Northern Uganda and Karamoja in which cash for public works programs are available Baseline: 7 (2015) Target: 67 (2022) Source: NUSAF3 M&E Report Number of persons in Northern Uganda and Karamoja benefitting from safety net programs Baseline: 0 (2015) Target: 2.075 m (2022) Source: NUSAF3 M&E Report Households connected to electricity (%) Baseline: 15 (2013) Target: 42 (2022) Source: Survey reports from UBOS Functional and operational water information system Baseline: 0 (2016) Target: 1 (2022) Source: IWMDP ISR	Completed: ASA: Social Protection Sector Review ASA: Social Protection, Governance and Fragility IPF: Agricultural Technology & Advisory Services IPF: Agriculture Cluster Development Project IPF: Regional Pastoral Livelihoods Resilience Project IPF: East Africa Agricultural Productivity (regional) IPF: Water Management & Development Project IPF: Third Northern Uganda Social Action Fund IPF: Multi-sectoral Food Security and Nutrition IPF: Energy Sector Development Project IPF: Energy for Rural Transformation II IPF: Energy for Rural Transformation III IPF: Lake Victoria Environment Mgmt Program II Ongoing: ASA: Social Development Dialogue IPF: Grid Expansion and Reinforcement (FY16) IPF: Development Response to Displacement Impacts in the HoA (regional) (FY16) IPF: Great Lakes Trade Facilitation (regional) (FY16) IPF: Integrated Water Management and Development Project AF (FY18) IPF: Development Response to Displacement Impact Project AF (FY19) IPF: Investing in Forests and Protected Areas for Climate Smart Development (FY20) IPF: Emergency Desert Locust Response Project (FY20) DPO: Emergency Fiscal and Growth Stabilization (FY20) IPF: Roads and Bridges in Refugee Hosting Communities (FY21) IPF: Electricity Access Scale Up (FY21)

Strategic Focus Area C: Boosting inclusive growth in urban areas

In the medium to long term, as improvements in technology require agriculture to be less labor intensive and population growth creates fragmentation and potential conflict over land, poverty gains from rural development will wane. Good jobs are the key to translating growth in urban areas into poverty reduction and shared prosperity. Migrants from rural areas and higher-skilled workers alike will need new opportunities for formal employment in urban areas to continue poverty reduction, and accelerated urbanization will be the conduit leading the rural poor to higher standard of living. Urban areas must be prepared for the influx of new residents while maintaining and upgrading key urban services. The private sector should operate in a strong business environment to facilitate investments that lead to more and better jobs.

CPF Objective 5: Improved business environment

Intervention Logic: Most new jobs in Uganda come from MSMEs, but they face a difficult business environment that creates a drag on job creation and dis-incentivizes formalization. At its base, improving the business environment to foster productive MSME growth and help new MSMEs enter the market, as well as encouraging larger businesses to invest, involves maintaining macro-economic stability and easing overly burdensome regulation on business while maintaining necessary rules and policies. But to invest, businesses need access to finance that comes with the certainty, transparency and accountability of land tenure and acquisition and resettlement policies, areas where WBG support will be key. They need security in the knowledge that their costs will be predictable due to a reliable and affordable supply of electricity and urban mobility, and that their outputs will find a market through regional transport links and lower barriers to trade. And they need a steady supply of healthy, educated, and skilled workers to produce their goods and services.

The World Bank, MIGA and IFC will provide support in several of these areas: improving the coverage of land registration, expanding access to credit for MSMEs including through use of non-land assets as collateral, expanding the grid to make power more accessible, and supporting the development of demand-driven skills training and improvements in health and education services. The World Bank will carry through its existing commitments in inter-city roads, but not provide new support, as other capable partners lead the dialogue there and the government has expressed greater demand in other areas. Since the development of the CPF in FY16, MIGA has issued in Uganda two products focused on expanding access to credit: one capital optimization PRI benefitting Absa Bank's subsidiary in Uganda, and one non-honoring guarantee for the Trade and Development Bank (TDB, regional development bank for the COMESA region) to benefit its member countries including Uganda. Both projects should support liquidity and access to finance in Uganda. This objective contributes to SDGs 8 and 9.

Challenges: Private investment is strongly influenced by the external environment which has been volatile in recent years. There is a time lag between infrastructure investments, improvements in the business environment, and private investment by firms. There are political and capacity challenges to roll out major land registration initiative in a short time frame. Finally, further delays in increasing the generation capacity may restrict affordability and reliability of electricity, which is a key constraint for reducing the cost of doing business.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
Objective indicator 10: Number of businesses with loans registered in the collateral registry Baseline: 0 (2015) Target: 6,730 (2022)/15% majority owned by women Source: CEDP project team Objective indicator 11: Credit to the private sector (billion UGX) Baseline: 6.63 (2014) Target: 20.0 (2021) 22 (2022) Source: BoU website	Time to register a business (days) Baseline: 27 (2014) Target: 5 (2022) Source: CEDP ISR Time to register land (days) Baseline: 42 (2014) Target: 25 (2022) Source: CEDP ISR, MLHUD report manual registration of property Urban land registered (%) Baseline: 70 (2014) Target: 90 (2022) Source: Land Information System Gender disaggregated data on urban land registration available Baseline: no (2016) Target: yes (2022) Source: Land Information System Power transmission lines (km) Baseline: 1,590 (2015) Target: 2,035 (2022) Source: UETCL website/ERA Website Annual report Participation of employers in skills training program Baseline: 82.5 (2017/18) Target: 90 (2021/22) Source: USDSP M&E framework Component 3 Note: Data is not national but reflects grantees of the Skills Development Facility under the USDSP. Determined by evidence of the resource base the employer commits to training measured along 3 parameters: (i) expended budget/funds on training activities; (ii) dedicated human resources; and (iii) dedicated time allocated for training. CPF Objective 6: Improved access to urban services		
Intervention logic: To sustainably accelerate its urbanization and maintain and improve living standards in urban areas, Uganda needs to prepare for migration to cities and small towns by strengthening the institutional capacity to develop implementable urban master plans to connect transport and services to land use as well as own source revenue mobilization. In terms of improving urban services, the Bank will focus its efforts on access to water and sanitation and electricity. The World Bank also supports the government of Uganda in strengthening the land acquisition, resettlement and rehabilitation policy. Additional support may come in the form of analytical work on public transport options, laying the groundwork for future investments as well as technical assistance in selected areas such as strengthening capacity to deliver sanitation and manage fecal sludge. IFC will work opportunistically to make investments in banks to assist with the growth of mortgage products to improve access to housing. This objective contributes to SDGs 9, 11, and 16. Challenges: Population growth in urban areas may move faster than the capacity to plan. The focus of policymakers could remain on current urban areas, without as much concern for outlying areas that will urbanize soon. Improving urban mobility is extremely complex, requiring coordinated efforts from multiple ministries, and there is limited demand expressed by the client for the World Bank to finance projects in this area.		
CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	WBG Program
Objective indicator 12: Urban population with access to clean water (%) Baseline: 73 (2014) Target: 80 (2022) <i>Source: Ministry of Water and Environment Sector Performance Report (2019)</i> Objective indicator 13: Paved roads in fair to good condition (%) (i) <i>Municipalities</i> Baseline: 55 (2016) Target: 65 (2022) (ii) <i>Kampala</i> Baseline: 64 (2016) Target: 74 (2022) <i>Source: Annual Roads Status Reports</i>	Towns with urban physical development plans (%) Baseline: 40 (2014) Target: 70 (2022) <i>Source: Physical development plans from National Physical Planning Board</i> Multi-modal transport plan adopted Baseline: no (2014) Target: yes (2022) <i>Source: Final report -adopted by KCCA</i> Number of towns with access to safe sludge and wastewater disposal facilities Baseline: 30 (2014) Target: 40 (2022) <i>Source: Ministry of Water and Environment Sector Performance Report</i> Urban customers (i.e., domestic, commercial, industrial) connected to the national electricity grid (number) Baseline: 0.8 million (2015) Target: 1.7 million (2022) <i>Source: Electricity Regulatory Authority</i> Note: Target assumes actual (2019) of 1.4 million and 100,000 new connections per year in 2020, 2021 and 2022. Annex 2: Matrix of Changes to Original CPF Results Framework

Original CPS Results Matrix		Updated CPF Results Matrix	Comments/justification
Strategic Focus Area A: Strengthening governance, accountability, and service delivery			
Objective 1: Enhanced economic governance and fiscal management			
OI 1.	Non-oil domestic revenue (% of GDP, 6-year annual average)	Unchanged	Indicator retained for the CLR. Baseline and target values updated to reflect rebasing of the GDP in 2016/17 and reweighting.
OI 2.	Ratio of average spending per capita between ten best-funded and ten worst-funded districts	Revised: Per capita financing levels for Local Government health, education, water and environment services	
	Indicator revised to capture the critical issue of adequacy of funding for LG services. The original indicator measured equality as distinct from equity. Values were off-track because: (i) the introduction of targeted grants to upgrade/build new facilities in specific LGs which might have had an impact on the equity of access to health facilities and secondary schools in the long-term, actually exacerbate the difference in per capita financing on an annual basis; and (ii) the education formula (soon after UglFT effectiveness) moved to base allocations on enrollment with limited use of school-age population.		
Supplementary Progress Indicators			
	New firms paying taxes (%)	Unchanged	Retained for CLR
	Budget execution data disclosed in open data format by MoFPED (%)	Unchanged	Retained for CLR and target increased from 50% to 100%.
	Average deviation of actual spending of MDAs from approved budget (%)	Unchanged	Retained for CLR and target year extended to align with CPF period.
	Projects underpinned by cost-benefit analysis (%)	Unchanged	Retained for CLR and target years extended from 2021 to 2022 to align with CPF period.
	Number of tax audits carried out by URA	Dropped	Indicator dropped as change in methodology and approach renders values not comparable. Furthermore, WBG activities shifted to focus on domestic revenue generation (captured by indicator above).
	Audited contracts rated low risk or better	Unchanged	Retained for CLR and target increased from 65% to 85% and target year extended to align with CPF period.
Objective 2: Improved social service delivery			
OI 3.	Gross enrollment rate, lower secondary school (%)	Unchanged	Retained for CLR and target year extended to align with CPF period.
OI 4.	Deliveries with skilled attendants (%)	Unchanged	Retained for CLR and target increased from 65% (2021) to 68% (2022).
Supplementary Progress Indicators			
	Primary school completion rate (%; or which girls)	Unchanged	Retained for CLR and baseline updated, and target year extended.
	Teacher absenteeism, primary (%)	Revised: Teacher absenteeism, primary in UTSEP schools (%)	Given unavailability of national data, indicator wording and baseline and target values revised to measure the % of P1-P7 teachers present in ERG schools. Data collected from unannounced annual visits to a sample of participating schools under the UTSEP/GPE Project.
	Proportion of qualified health workers (%)	Revised: Proportion of approved posts in public health facilities filled by qualified health workers (%)	Wording revised for consistency with sector indicator. Target increased from 75% (2021) to 76% (2022).

	Facilities without tracer drug stock-outs over a period of three months (%)	Revised: Proportion of health facilities that have 95% of the basket of essential RMNCAH commodities in the previous three months (%)	Wording, values and data source revised for consistency with sector indicator and values.
		Added: Proportion of Covid-19 suspected cases having laboratory confirmation within 48 hours.	Indicator added to measure national capacity to respond to pandemics.
Objective 3: Increased agricultural commercialization			
OI 5.	Marketed volumes by select commodities – beans, cassava, rice (metric tons)	Revised: Percentage increase of marketed produced for maize, rice, beans, cassava and coffee by participating ACCEs in project areas.	Indicator revised to expand number of commodities and ensure data availability.
OI 6.	Yields by select crop (metric tons/acre)	Unchanged	Retained for CLR and target increased/adjusted to be in line ACDP
Supplementary Progress Indicators			
	Number of irrigation schemes designed	Unchanged	Retained for CLR and target year extended to 2022.
	Number of farmer organizations undertaking collective action (input and output marketing)	Unchanged	Retained for CLR and target increased from 250 (2021) to 300 (2022).
	Farmers reached with agricultural inputs and services through e-voucher schemes	Unchanged	Retained for CLR and target year extended to 2022.
	Rural land registered (%)	Unchanged	Retained for CLR and target increased from 10% (2021) to 12% (2022).
	Gender disaggregated data on rural land registration available	Unchanged	Retained for CLR.
		Added: Number of farmers reached as consumers of fertilizers	Added to reflect IFC strategic focus on and support to agribusiness.
Objective 4: Enhanced resilience of the poor and vulnerable			
OI 7.	Household assets (% households sharing at least two basic assets)	Revised: Vulnerable households (% national)	Indicator dropped due to infrequent data collection and lack of post-COVID-19 data. Replacement indicator measures the change in percentage of vulnerable households. Target value reflects efforts to keep % from declining dramatically due to COVID-19 outbreak.
OI 8.	Annual rate of forest loss as a proportion of national forest cover (%)	Revised: Land area under sustainable landscape management practices (ha)	Original indicator dropped due to lack of available data. Replacement indicator measures the land area for which new and/or improved sustainable landscape management practices have been introduced to which the recently approved Investing in Forests and Protecting areas for Climate-Smart Development Project is expected to contribute substantially.
OI 9.		New: Refugees and host community members with access to social and economic services and infrastructure (of which 50% are female)	Indicator is introduced to measure support to Government's development response to refugee inflows to which the World Bank contributes substantially, including through the World Bank's Development Response to Displacement Impacts Project (approved in May 2016 and declared effective in July 2017). DRDIP is designed to improve access to basic social services, expand economic opportunities, and enhance environmental management for communities hosting refugees through a community driven development approach in 11 hosting districts.
Supplementary Progress Indicators			
	Number of districts in Northern Uganda and Karamoja in which cash for public works programs are available.	Unchanged	Indicator retained for CLR. Target and actual numbers revised to reflect proliferation of districts due to an administrative division of the original project area.

	Number of households in Northern Uganda and Karamoja benefiting from safety net programs.	Revised: Number of persons in Northern Uganda and Karamoja benefiting from safety net programs.	Indicator revised to measure number of "persons" rather than "households" for consistency with data collection.
	Households connected to the electricity grid (%)	Revised: Households connected to electricity (grid and off grid)	Indicator revised to reflect increased access to electricity through grid and off-grid connections.
	Functional and operational water catchment management system	Revised: Functional and operational water information system	Indicator revised for consistency with language adopted by water sector.
	Land covered by resilient landscapes program (ha)	Elevated to objective level (and revised).	Indicator revised for consistency with wording of project and corporate indicator and replaced original OI 8 (see above).
Objective 5: Improved business environment			
OI10.	Number of businesses with loans registered in the collateral registry	Unchanged	Retained for CLR and target year extended to 2022.
OI11.	Credit to the private sector (billion UGX)	Unchanged	Retained for CLR and target year extended to 2022.
Supplementary Progress Indicators			
	Time to register a business (days)	Unchanged	Achieved and retained. Target year extended to 2022 (consistent with CEDP RF).
	Time to register land (days)	Unchanged	Achieved and retained. Target year extended to 2022 (consistent with CEDP RF).
	Urban land registered (%)	Unchanged	Retained for CLR and target year extended to 2022.
	Gender disaggregated data on urban land registration available	Unchanged	Retained for CLR and target year extended to 2022.
	Power transmission lines (km)	Unchanged	Achieved and retained for CLR.
	Number of loans disbursed to SMEs as a result of investments in expanding access to credit	Dropped	Indicator dropped as methodology and data quality uncertain.
	Participation of employers in skills training programs	Unchanged	Retained for CLR and target year extended to 2021/22.
Objective 6: Improved access to urban services			
OI 12	Urban population with access to clean water	Unchanged	Retained for CLR and target year extended to 2022.
OI 13	Paved roads in fair to good condition (%)	Unchanged	Retained for CLR and target year extended to 2022.
Supplementary Progress Indicators			
	Towns with urban physical development plans (%)	Unchanged	Retained for CLR with target year extended to 2022.
	Multi-modal transport plan adopted	Unchanged	Achieved and retained for CLR.
	Number of towns with access to safe sludge and wastewater disposal facilities	Unchanged	Retained for CLR with target year extended to 2022.
	Electricity consumers reached through investments in distribution	Revised: Urban customers (i.e., domestic, commercial, industrial) connected to the national electricity grid (number)	Indicator revised to strengthen focus on urban customers and to reflect partnership/collaboration within the WBG

Annex 3: CPF Results Monitoring Matrix

Strategic Focus Area A: Strengthening governance, accountability and service delivery			
All CPF objectives complement proposed improvements in social service delivery and improved governance, management and accountability for public resources, which will accelerate poverty reduction and boost shared prosperity. While improvements in health and education are important, migrants to urban areas need strong human capital development to be able to access better jobs that will be created over the medium term. Good health and education would also empower women to access opportunity in a growing Ugandan economy. Increasing economic growth and tax revenue while efficiently allocating and spending resources will maximize the poverty impact and boost shared prosperity.			
CPF Objective 1: Enhanced economic governance and fiscal management			
Intervention Logic: The public sector must become more effective in using public resources by closing the policy implementation gap to help Uganda accelerate poverty reduction. This requires four primary changes: (i) increasing revenues to expand the fiscal space to finance infrastructure and social service needs; (ii) improving the allocation of resources both between sectors and levels of government; (iii) preparing for the effective management of future oil revenues and improving debt management; (iv) enhancing expenditure management through improved PFM; and (v) improving efficiency of public investment management, including procurement management. This needs to be complemented by strengthening country systems for transparency, participation. This objective contributes to SDGs 8, 10, and 16. Therefore, the Bank will support Uganda through a series of interventions and ASAs to enhance revenue at the central and the sub-national level, including efficiency of resource allocation, using poverty maps and analysis to target the poor. This will be supported by lending operations with strong sector content that will seek to improve resource allocation for service delivery to local governments and enhance transparency and accountability. In addition, an investment project will focus on statistical capacity building to close systematic gaps as well as those within the priority areas covered by the CPF. On enhancing expenditure management, the Bank will design a results-based operation aimed at improving the use of public financial and procurement management systems; making budget planning and execution more transparent, reducing procurement delays while enhancing integrity respectively; and improving the sanctions regime. The operation will complement reforms to enhance citizen engagement using social accountability mechanisms. The Bank will continue the technical assistance to the implementation of the debt management strategy; and continue the mandatory debt sustainability assessments jointly with the IMF, especially in the context of future oil flows. Challenges: While support for formal changes in policies has been strong in recent years, enthusiasm has flagged during the implementation phase. There is also a risk that vested interests of different stakeholder's delay reforms, and that the government will continue to find it difficult to translate important policy reforms into practical implementation.			
CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress Update	WBG Program
Objective Indicator (OI) 1: Non-oil domestic revenue (% of GDP, 6 yr annual avg) Baseline: 12.1 (2010-15) avg* Target: 13.9 (2016-21) avg* Actual: 13.2 (2014-19) avg* Source: Ugandan authorities; WB and IMF staff estimates *Note: Rebasings of the GDP in 2016/17 and reweighting resulted in an increase in the overall GDP between 2016 and 2019 of over 18 percent. As a result of this exercise, the numbers above were revised. Revised numbers are included in Annex 1. Objective Indicator 2: Ratio of average spending per capita between ten best-funded and ten worst-funded districts (i) Health Baseline: 7.0 (2014) Target: 2.1 (2021) Actual: 5.57 (2019); 5.61 (2020) Source: MoFPED and MoH (ii) Education (spending per child of school going age) Baseline: 7.2 (2014) Target: 2.8 (2021) Actual: 3.45 (2019); 4.15 (2020) Source: MoFPED and MoES	New firms paying taxes (%) Baseline: 0.77 (2015) Target: 3 (2021) Actual: 3.6 (2019) Source: Uganda Revenue Authority (URA) Achieved. The Uganda Domestic Revenue Mobilization ASA (published as the 11th edition of the Uganda Economic Update) contributed significantly to the formulation of government's Domestic Revenue Mobilization Medium Term Strategy. Specific measures include improved registration of firms and data mining to identify new firms to include in the register. The WB-supported ASA made recommendations to tackle informal measures for broadening the tax base for income tax, excise and VAT that attracted new taxpayers. The Bank is also providing TF-financed support to build the capacity of the URA to implement the second-generation Integrated Tax Administration System (ITAS), rebuilding data science, business analysis and ICT and other competencies all of which advance the identification and capturing of firms in the tax net. Budget execution data disclosed in open data format by MoFPED (%) Baseline: 0 (2014) Target: 50 (2021) Actual: 100 (2019) Source: MoFPED; http://www.budget.go.ug Achieved. The Ministry of Finance publishes detailed information on a dedicated budget website. The Online Transfer Information System (OTIMS) assists in the development and transparent management of the budget, including allocations and transfers/releases to local governments. Government and other stakeholders rely on the WBG BOOST Public Expenditure Database; data is available for all MDAs. In the remained of the CPF period, further support will be provided to MoFPED to develop the interface between the budget website and online budget system to make available real-time data. Interface is expected to be available for 50% of MDAs by 2021 and 75% by 2022.	OI 1: On track Tax reforms, initiated between 2016-19 and informed by the WB's Uganda Domestic Revenue Mobilization ASA (FY18), resulted in increases in non-oil domestic revenue. Recommended reforms implemented as part of government's new medium-term Domestic Revenue Mobilization Strategy include the reduction of tax exemptions; extending of the tax net; and renewed support for tax collection effort, particularly with respect to VAT. Funding Strengthening Capacities and Institutions for PIM, PPPs and DRM, approved in April 2020, supports the Uganda Revenue Authority in enhancing preparedness for the next generation of efficiency and revenue raising reforms as part of ongoing efforts to implement the DRM strategy. Tax revenues, in part due to tax deferrals and other measures in response to Covid-19, are expected to decline in FY20 and FY21.	Current program: ASA: Country Economic Memorandum ASA: Public Investment Management ASA: Improving Public Procurement ASA: Fiscal Transfers Reform New program (indicative): ASA: Uganda Economic Update series ASA: Debt Management Reform Plan (FY16) ASA: Domestic Revenue Mobilization (FY20) DPO: Fiscal decentralization, governance, and service delivery (FY16) DPO: Fiscal decentralization, governance, and service delivery II (FY17) PforR: Governance/public sector performance (FY18) IPF: Statistical capacity and M&E (FY18) PforR: Intergovernmental fiscal transfers (FY18) DPO: Revenue mobilization/public expenditure (FY19)

	Average deviation of actual spending of MDAs from approved budget (%) Baseline: 18.4 (2015) Target: 5.0 (2021) Actual: 16.5 (2019) Source: MoFPED Off track. Reforms to improve budget execution, especially on stronger and more streamlined PIM systems, and procurement are supported by trust-funded technical assistance. Nonetheless, at the overall budget level, under-execution remains an issue due primarily to procurement-related delays as well as stricter requirements for environmental and social safeguards. Projects underpinned by cost-benefit analysis (%) (iii) <i>Projects in the PIP with CBA</i> Baseline: 10 (2015) Target: 60 (2021) Actual: 45.6 (2020) Source: MoFPED, PAP Department (iv) <i>Investment component share in the PIP (%)</i> Baseline: 67 (2015) Target: 80 (2021) Actual: 69.21 (2019) Source: MoFPED, PAP Department Note: the baseline indicator was derived from a 'dirty' PIP database, which included stale projects, programs and non-capital projects. The PIP has since been cleaned, and current 'cleaned' figures, provide a more accurate measure. On track. Reforms to strengthen public investment management have supported capacity building and establishing systems for proper appraisal of projects under a DFID-supported PIM support program. The number of Projects in the PIP with CBA is expected to increase rapidly following capacity development of MDAs and the appraisal process that is adopting the Integrated Bank of Projects (IBP) system, which requires all projects to have been subjected to a CBA before being processed. The investment component share in the PIP is expected to continue to improve. Section 4.3 of the DC guidelines place a threshold for ongoing projects of 50% of their budget on capital investment. Number of tax audits carried out by Uganda Revenue Authority Baseline: 4,209 (2015) Target: 5,470 (2021) Actual: 1,345 (2019) Source: URA Annual Press Brief Off track. The apparent significant decline in the number of actual audits compared to baseline is due to a change in the URA's compliance management strategy. In 2014/15, URA executed three types of audits: comprehensive, issue, and desk audits. Effective 2017, URA changed to executing and monitoring return examinations, comprehensive audits, health reviews, compliance reviews, compliance advisories, and spot inventory checks. The baseline, target, and actual values are thus now not comparable. Audited contracts rated low risk or better (%) Baseline: 45 (2014) Target: 65 (2021) Actual: 85 (2018) Source: Public Procurement and Disposal of Public Assets Authority Achieved. The Audit covered 36.65% of the total national procurement budget (by value). The PPDA received Bank support to update the Government Procurement Portal to open data standards and more MDAs are now uploading their procurement data. PPDA continues to receive support under the Regional Communication Infrastructure Project 5 for the development and roll-out of e-governance systems.	OI 2: Off track According to the CPF, in 2015 public spending per capita on health and per child on education differed by a factor of 10 or more across districts. This differential leads to a variation in the level of services seen, for example, in the share of babies delivered in facilities, and the number of students per primary teacher. Although ASA support to this objective has been significant, the cancellation of the decentralization, governance, and service delivery DPO series and the almost two-year delay in the effectiveness of the UglIFT P4R has impeded achievement of this indicator. But critical steps have recently been made towards restoring the adequacy and equity of financial service delivery. In 2019/20 after years of decline, budgeted operational funding for schools has increased by 25% and health facilities by 43%. Enhanced, equitable formulae for conditional non-wage recurrent grants and conditional development grants in health and education as of end-2019 are being implemented as planned. The new formula for non-wage recurrent grants has resulted in some improvement in equity which is likely to be sustained. Allocations to development grants, however, are less equalizing in per capita terms than originally envisioned, and thus this objective is unlikely to be achieved. Average conditional non-wage recurrent grants for education services for the 20 least funded districts per child of school going age increased from 8,303 in 2018 to 10,528 in 2019. Average conditional non-wage recurrent grants for health services per beneficiary for the 20 least funded districts per capita increased from 692 in 2016 to 726 in 2019 (UglIFT ISR).	
--	--	---	--

Intervention Logic: Much of Uganda's inclusive development in the short and longer terms critically depends on helping people develop capacities to become self-reliant and productive participants in Uganda society. The Human capital Index for Uganda indicates a child born in Uganda today will only be 38 percent as productive as she could be if she had completed education and maintained full health when growing up; which ranks the country 137 out of 157 on the HCI. To seize opportunities people must have a basic level of health, knowledge, and skills. The Government's primary role in this process is to provide the foundations of primary healthcare services and basic education. Health services would include include services that address the triple burden of reproductive maternal, newborn, child and adolescent health conditions and malnutrition; infectious diseases such as malaria; and non-communicable disease that are becoming prevalent. Basic education services would focus on providing children and adults a full cycle of education with skills and cognitive development to tap into labor market opportunities. Addressing under-nutrition would help to improve health and learning outcomes, and enhance productivity thereby contributing to sustained and equitable economic growth.

In primary education, access is nearly universal, but quality is variable and many students, particularly from poorer households, dropout before completion. Access to secondary education is limited, and financing remains inefficient. These shortcomings are particularly prominent in the North and East of the country. With the closures of schools due to COVID 19 the inequalities in access to education have widened further and will have an impact on the learning outcomes. The Bank will continue to implement its investment in improving quality and equity of primary education by, among others, improving teacher effectiveness, school level accountability systems, and focusing on schools in rural areas, including measures to prevent sexual and gender-based violence (a common cause of school dropouts amongst girls) against children both in and out of schools. A new project will focus on increasing access to and quality of secondary education including refugee children. Of importance is progression and retention of girls in secondary school to expand their education and labor market opportunities and indirectly slow population growth. Finally, the Bank will continue ongoing work in skills development by supporting high quality and demand driven skills training in key growth sectors (oil & gas, agriculture & construction) Given Uganda's young population the Bank will likely introduce a new operation on youth employment to help Ugandans become more employable as the labor market evolves.

The underlying challenges facing the health sector and constraining its performance arise from the high disease burden (the majority of which is preventable) and under-resourcing, coupled with ineffective and inefficient deployment of human resources, medicines, equipment and infrastructure. Low management and operational capacity in the cities, local governments and health facilities dampen the capacity of these entities to deliver high quality health services required to achieve universal health coverage objectives. As a result, coverage of several key programs is suboptimal, and furthermore, there is significant regional variation in coverage and quality of care. Bank support centers on strengthening health systems and infrastructure, improving incentives for health providers, and increasing the results focus of the Government's health programs. Other partners will focus their efforts on disease prevention, including for specific diseases and through more general approaches including hygiene and water. In both health and education, the Bank will help the government support both public and private sector provision of services. This objective contributes to SDGs 3, 4, 5, and 10.

Challenges: Government financing of health and education has been declining as a share of the budget and of GDP, and given the rapidly growing population and government policies to provide free basic health and education services, adequate resourcing of the sector is important to ensure adequate access to and quality of services. This ultimately reflects as severe shortage of critical resourcing including staffing, infrastructure, equipment, materials/medicines and low level of motivation among service providers (facilities and personnel), a situation that has been accentuated by proliferation of districts and high population growth rate unmatched by resource allocation.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress Update	WBG Program
Objective indicator 3: Gross enrollment rate, lower secondary school (%) Baseline: 37 (2015) Target: 47 (2021) Actual: 42 (2019/20) % of which are girls Baseline: 34 (2015/16) Target: 45 (2020/21) Actual: 43 (2019/20) Source: Education Management Information System (EMIS) Note: GER for lower secondary is calculated by number of students enrolled in S1-S4, as a % of all children 13-16 years old. Objective indicator 4: Deliveries with skilled attendants (%) Baseline: 50 (2015) Target: 65 (2021) Actual: 63 (2019) Source: Annual Health Sector Performance Report; Improving Delivery of Maternal Services ICR	Primary school completion rate (% of which girls) Baseline: 59 (60 for girls) (2013) Target: 65 (66 for girls) (2022) Actual: 61 (64 for girls) (2019) Source: UBOS (population data and projections); EMIS for P7 completion Note: Primary completion rates are calculated by number of children in relevant age group who have completed the last grade of primary level (P7), i.e., the number of students registered for end of cycle exams, as a % of the total population of the same age group. On track. After not showing much improvement for nearly a decade, the primary school completion rate for 2019 shows promising improvement. Grade 7 survival rates, arguably a better measure of educational attainment also, improved - from 30.1% in 2015 to 34.4% in 2019. While COVID-19 related school disruptions may hamper continued progress, multiple interventions by different donors are currently in place to mitigate this risk. The recently approved World Bank-managed GPE C-19 Emergency Education Response Project which will support to continuity of learning and the reopening of schools is currently awaiting effectiveness. Teacher absenteeism, primary (%) Baseline: 25 (2015) Target: 20 (2021) Actual: 9 (2019) * Source: Baseline data is national, collected by WB Service Development Indicators survey. Updated national data is not available. Actual value from data collected through unannounced annual visits of a sample of participating schools (some of the lowest performing schools) under the UTSEP/GPE Project which measures % of teachers (P1-P7 present in ERG schools. Achieved (with qualification) in UTSEP schools). Recognizing that	OI 3: On track Despite pioneering the introduction of universal access to secondary education in SSA, the secondary education enrollment rate in Uganda had remained stagnant at just below 30% for about a decade – significantly below regional comparators. In the past year, lower secondary enrollment rates have increased significantly and are now on track. The Bank contributes to this objective through the UglFT Program and the proposed Secondary Education Expansion Project (FY21) which is aimed at enhancing equitable access to lower secondary education in underserved areas and for underserved populations, including refugees and host communities and girls. OI 4: On track Despite implementation challenges affecting the Reproductive, Maternal and Child Health Services Project since effectiveness, including delays in procurement and payment approvals and low levels of ownership and proactivity by line departments, important outcomes are on track or targets surpassed. At 63%, the percentage of skilled deliveries is on track to meet target of 65% (2021).	Current program: ASA: Improving Health Services ASA: Education Sector Reform IPF: Health Systems Strengthening Project IPF: Reproductive Health Voucher Project IPF: Multisectoral Food Security & Nutrition IPF: East African Public Health Laboratory Network (regional) IPF: GPE Teacher & School Effectiveness IPF: Albertine Region Sustainable Development Project New program (indicative): ASA: Sustainable Health Financing in Uganda (FY22) IPF: Uganda Reproductive, Maternal and Child Health Services (FY16) IPF: Africa Higher Education Centers of Excellence (regional) (FY16) Uganda Covid-19 Response and Emergency Preparedness Project (FY20) IPF: Secondary Education Improvement (FY17) IPF: Social development (FY17) IPF: Human development operation (FY20/21) IPF: Third Northern Uganda Social Action Fund IPF: Skills Development Project
CPF Objective 2: Improved social service delivery	teacher absenteeism undermines learning, the TSEP enhanced teacher accountability by reducing rates of absenteeism in participating schools (from 27% in 2017 to 9% in 2019, exceeding a target of 10%). Proportion of qualified health worker vacancies filled (%) Baseline: 69 (2015) Target: 75 (2021) Actual: 75 (2019) Source: Annual Health Sector Performance Report		

	Achieved. Under the Health Systems Strengthening Project, the % of approved positions filled by qualified health workers increased from 56% in 2009 to 73% in 2017, exceeding the revised project target of 70%. Facilities without trace drug stock-outs over a period of three months (%) Baseline: 62 (2015) Target: 70 (2021) Actual: 84 (2019) Source: Uganda Reproductive Maternal and Child Health Services Improvement Project (URMCHIP) ISR. Achieved. Supported by the procurement of essential medicines under the Uganda Reproductive Maternal and Child Health Services Improvement Project (URMCHIP Project), the % of health facilities without stock outs of the six tracer drugs has exceeded the target. This continues progress achieved under the Health Systems Strengthening Project. The primary indicators measured through the Medicines Logistics Management Information System has been changed from "facilities without tracer drug stock-outs over a period of three months" to the "Proportion of health facilities that have 95% of the basket of RMNCAH commodities in the previous three months (%)". In 2020, 45% of health facilities met the criteria - an improvement of 52% in 2015.	While the project has contributed to improvements – especially through results-based financing, scholarship schemes for health personnel and procurement of essential medicines – the health sector also receives funding from other donors and is coordinated through a sector-wide approach. The Reproductive Health Voucher Project (closed Dec 2019) designed to increase access to skilled care among poor women in rural and disadvantaged areas during pregnancy and delivery, exceeded its targeted number of deliveries attended by skilled health personnel. It supported improvements in quality and significantly reduced maternal deaths in participating facilities. Under the Health Systems Strengthening Project, the % of deliveries in government and private, not for profit health facilities increased from 34% in 2009 to 58.1% in 2017, exceeding the target of 50%.	
--	--	--	--

Strategic Focus Area B: Raising incomes in rural areas

In the short to medium term, there is great opportunity in Uganda for rural development and increases in income in rural areas, which will lead directly to robust poverty reduction. Growth in agriculture has had a strong impact on poverty in recent years. The livelihoods of more than 4 in 5 Ugandans are dependent on income from agriculture. But compared to neighboring countries, agricultural growth has been slow, productivity is low, and entire regions of the country have largely been excluded. Variability in income due to external shocks leaves many families vulnerable to falling back into extreme poverty even after they had initially escaped it.

CPF Objective 3: Increased agricultural commercialization

Intervention logic: Growth in the agriculture sector requires higher agricultural productivity and increased commercialization, given the limited remaining potential for expansion of cultivated land, and the unpredictability of weather and prices. The WBG program takes a broad approach to boosting productivity and increasing commercialization, including interventions in many sectors that will encourage farmers to invest in their land. Constraints brought on by COVID19 are likely to impact land area cultivated, agricultural productivity due to low production, reduce household incomes and increase the risk of food insecurity. The program will tackle access to and security of land and access to finance, so farmers have the capacity to invest. It will support improved extension services, so farmers have the right information to invest and to adopt sustainable farming practices using high quality agricultural inputs. The program will mitigate the impacts of climate change manifested in new pests and diseases, case in point being the Fall Army Worm (2017) a new pest on both cereal and grain crops, as well as new diseases such as Cassava Brown Streak Disease (2016), and more recently, the Desert Locust invasion of 2020 that threatened to reverse productivity increases, all of which require investments in research for control measures. And it will help farmers capture economies of scale, including through associations and commercialization. The program will also help farmers get better prices, creating the incentive to invest. This will include strengthening value chain coordination in agribusiness and providing better price information and storage solutions so farmers can reduce post-harvest losses, sell when prices are attractive, and face lower transport costs to markets. As observed by the SCD, given current income levels, the high share of income going to consumption, and the relatively closed economy, an increase in income can produce large multiplier effects. Key indicators are both yields and marketed volumes of selected crops. These will show both that farmers are producing more, and that they are receiving a return on their investment and labor by getting their product to market. This objective contributes to SDGs 1, 2, 7, 8, 9, and 10.

Challenges: First, strategic and policy uncertainty combined with capacity constraints in Ministry of Agriculture, Animal Industry and Fisheries have hampered progress on previous direct support to the agriculture sector. Second, there is a time lag between land registration, access to finance, and greater investment by farmers, suggesting increased productivity through this lever may not begin until the end of the CPF period. Third, the agriculture sector has a track record of slow implementation. Fourth, the dependence on rain-fed agriculture and volatile commodity prices makes yields and productivity highly sensitive to climate and external conditions. Fourth, ultimately agricultural productivity will continue to rely heavily on weather conditions and associated pests and diseases necessitating development of early warning capabilities.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress Update	WBG Program
Objective Indicator 5: Marketed volumes by select commodities (metric tons) Baseline (2014): Beans: 297,000 Cassava: 1,200,000 Rice: 100,000 Target (2021): Beans: 357,000 Cassava: 1,500,000 Rice: 120,000 Actual (2019): n/a <i>Source: MAALF-ACDP MTR Annual Reports</i> Objective Indicator 6: Yields by select crops (metric tons/acre) Baseline (2014): Beans: 1.5 Cassava: 3.3 Maize: 2.3 Rice: 1.9 Target (2021): Beans: 1.8 Cassava: 4.0 Maize: 2.8 Rice: 2.3 Actual (2018): Beans: 1.9 Cassava: 3.6 Maize: 3.1 Rice: 2.8 <i>Source: Impact Evaluation of ATAAS Project; ICR</i>	Number of irrigation schemes designed Baseline: 0 (2016) Target: 10 (2018) Actual: 5 (2019) <i>Source: ACDP ISR</i> On track ACDP tracks the number of designs for irrigation rehabilitation and expansion schemes. According to the ISR, target has been achieved Target: 250 (2021) Actual: 216 (2019) <i>Source: ACDP MIS (M&E team)</i> On track. In 2019, 118 new farmer organizations applied for and received matching grants supported by the ACDP project. Farmers reached with agricultural inputs and services through e-voucher schemes Baseline: 0 (2016) Target: 100,000 (2021) Actual: 108,000 (2020) <i>Source: ACDP MIS</i> Achieved. Following the restructuring of the ACDP approved in June 2018, the overall operating environment for the e-voucher system improved. A fully functioning e-voucher system saw rapid progress with farmer profiling and registration growing from 53,701 farmers in 2019 to 108,000 farmers by 2020, and the number of farmers accessing inputs increased over 120% to 20,615 during the same period. Rural land registered (%) Baseline: 5 (2014) Target: 10 (2021) Actual: 10.8 (2019) <i>Source: MLHUD report manual registration of property</i>	OI 5: not rated Current national level data for marketed volumes of select commodities (i.e., beans, cassava and rice) are not available. The Agricultural Cluster Development project, focused on raising on farm productivity, production and marketable volumes of selected agricultural products, was approved in Apr 2015, but not declared effective until Jan 2017 (and restructured in Jun 2018). ACDP measures percentage increase in maize, rice, beans, cassava and coffee by participating farms and percentage increase of marketed produce for these crops. Under the project, 2022 targets for beans and rice have already been exceeded. Marketed volumes of maize, cassava and coffee are increasing towards targets.	Current program: IPF: Competitive & Enterprise Development Project IPF: Agricultural Technology & Advisory Services IPF: Agriculture Cluster Development Project IPF: Regional Pastoral Livelihoods Resilience Project IPF: East Africa Agricultural Productivity (regional) IPF: North Eastern Road Corridor Asset Management Project IPF: Energy Sector Development Project IPF: Energy for Rural Transformation II IPF: Energy for Rural Transformation III IPF: Skills Development Project IFCI Investment in Pearl Dairy New program (indicative): IPF: Grid Expansion and Reinforcement (FY16) IPF: Development Response to Displacement Impacts (regional) (FY16) IPF: Great Lakes Trade Facilitation (regional) (FY16) IPF: East Africa Agricultural Productivity II (regional) (FY18) Climate funds: Forest and landscape (FY18) IPF: Private sector development/land (FY19) IPF: Irrigation/water management (FY19) DPO: Agriculture (FY20) IPF: Energy (FY21)

	Achieved. The Uganda Economic Update published in September 2015 entitled “Searching for the ‘Grail’: Can Uganda’s Land Support its Prosperity Drive” argued that the most critical challenge is to identify policies and actions that can raise productivity and incomes for agriculture and low-income non-agriculture firms, where most of the people are currently employed; or to facilitate people to shift into those areas where productivity is high and incomes for workers can rise fast. One critical factor for such a transformation is the way land is managed in Uganda. The UEU recommended accelerating the process of systematic registration of land, redesigning Land Fund, strengthening land management administration institutions, prioritizing policy commitments re. land. Between 2014 and 2019, the percentage of rural land registered increased from 5 percent to 10.8 percent, exceeding the target of 10 percent. The USMID Project is increasing land tenure security in refugee hosting districts and the Commercial Enterprise Development Project (CEDP) piloted the systematic registration of communal and individually owned land through Certificates of Customary Ownership. Gender disaggregated data on rural land registration available Baseline: no (2016) Target: yes (2018) Actual: no (2019) Source: MLHUD report manual registration of property Off track. Add: Number of farmers reached as consumers of fertilizers Baseline: 10,000 (2018) Target: 80,000 (2021) Actual: n/a (2019) Source: Grainpulse Project (IFC) CCN PPT: Introduce indicator at PLR to reflect IFC strategic focus on and support to agribusiness. Confirm wording and values and data source with IFC and understand/explain inputs.	OI 6: On track Under the Agricultural Technology & Advisory Services Project (closed 6/2018), yield increases for maize, rice, cassava and beans compared to baseline and non-beneficiaries were substantial and reflected the project’s efforts. Yield targets for beans, maize and rice were exceeded. The target for cassava yields, attributable to promotion and dissemination of improved seed varieties under the project, is on track. According to the ATAAS Project ICR, net agricultural incomes of project beneficiaries grew about 200% over the project’s duration, significantly exceeding targets (20% for men; 15% for women). At project closing, the impact evaluation (2018) revealed net agricultural incomes for beneficiaries were appreciably higher than non-beneficiaries operating maize (58%), rice (40%), cassava (28%), and beans (401%).	
--	--	--	--

CPF Objective 4: Enhanced resilience of the poor and vulnerable

Intervention logic: Even as agricultural productivity increases, people in rural areas are increasingly vulnerable to long-term degradation of natural resources, droughts, and volatility in farm-gate prices. Indeed, in recent years, for every three people to rise out of poverty, two have fallen back into poverty. Mitigation of shocks -by helping people who face them, and building up household and community assets, which increase resilience to shocks - is essential to stability and to reducing vulnerability.

The Bank will support Uganda in expanding its system of safety nets, focused in particularly on the vulnerable Northern region, to help those already in poverty and those who have fallen back into poverty and build resilience, mitigate risks and support vulnerable households to invest in human capital especially in times of shocks such as COVID19 and climate-related. It will also support those communities hosting refugees displaced from conflicts in neighboring countries, and help the government protect vulnerable groups through improved social risk management, including prevention of sexual and gender-based violence related to infrastructure development and public works, which accounts for a large share of WBG activities. In addition, the Bank will support social development dialogue and client capacity building to increase inclusion, sustainability, transparency and accountability in development-induced land acquisition. For water for production, the Bank will support the government's development of integrated water resources management plans for key catchments and invest in monitoring and information systems for sustainable water flows and water for production including expanding the use of irrigation to mitigate against droughts.

Investments in water for production will be made late in the CPF period, so results will only become apparent during the following CPF cycle. Support to farmers will include a shift to 'climate smart' agriculture. The Bank will also support investments in the environment and natural resources, including projects in forests and climate adaptation, to help preserve the eco-system on which Ugandan livelihoods depend. This objective contributes to SDGs 6, 13, and 15.

Challenges: Difficulties in targeting safety net support to the poorest, balancing expanded water production with water resources management, and the employability of potential workers in rural areas. Furthermore, the agriculture value chain is currently not adequately developed to generate sufficient off-farm employment and the renewable natural resource base is becoming rapidly degraded.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress Update	WBG Program
Objective indicator 7: Household assets (% households sharing at least two basic assets) Baseline: 56.3 (2013) Target: 66.9 (2021) Actual: n/a (2016) <i>Source: Uganda National Household Survey Report (UNHS)</i> Objective Indicator 8: Annual rate of forest loss as a proportion of national forest cover (%) Baseline: 4.14 (2010-2015) Target: 2 (2016-2021) Actual: n/a <i>Source: Joint Sector Review Report (2019)</i>	Number of districts in Northern Uganda and Karamoja (55 districts) in which cash for public works programs are available Baseline: 7 (2015) Target: 55 (2021) Actual: 66 (2019) <i>Source: NUSAF3 M&E Report</i> Note: While the area covered has remained the same, the number of participating districts has been changed from 55 to 67 due to an administrative division of the original area. Achieved. The Northern Uganda Social Action Fund 3 (approved in May 2015 and declared effective in March 2016) is being implemented in 66 districts. It includes a labor-intensive public works (LIPW) component which provides temporary employment opportunities for poor and vulnerable households that help them sustain and increase their assets and smooth consumption during lean seasons while creating physical assets of value to the local communities. As of March 2020, over 13.67 million person days of employment were created under the project, and 2,471 community assets built. Female beneficiaries of LIPW subprojects as of March 2020 total almost 689,795. Number of households in Northern Uganda and Karamoja (55 districts) benefitting from safety net programs Baseline: 0 (2015) Target: 415,000 (2021) Actual: 322,325 (Mar 2020) <i>Source: NUSAF3 M&E Report</i> On track. NUSAF3 provides unconditional cash transfers and cash-for-work, food-for-work and public works to targeted beneficiaries. Beneficiaries of these safety net programs in March 2020 totaled over 1.6 million, of which over 50% were female. Households connected to the electricity grid (%) Baseline: 15 (2013) Target: 20 (2021) Actual: 24 (2018) <i>Source: Survey reports from UBOS</i> Achieved. According to the National Electrification Survey 2018 (UBOS) carried out under the Uganda Energy for Rural Transformation Phase 3 Project (approved in Jan 2015 and effective as of March 2016), 24% of households are connected to the national grid while an additional 18% are connected to off-grid solar systems providing at least Tier 1 electricity services. Under the ERT-3 Project, which seeks to increase access to electricity in rural areas, the number of households connected to the national grid as of November 2020 was 155,625 - compared to a target of 150,000 by Dec 2021.	OI 7: Not rated. The team has not been able to replicate the baseline and target figures included in the original RM nor thus the actual. The indicator is therefore "not rated". Based on the UNHS 2012/13 and 2016/17 UNHS microdata, the percentage of households who own a phone, television, computer, refrigerator, radio, vehicle, motorcycle, bicycle increased substantially from 41% in 2013 to 55% in 2016. This increase, however, is likely driven by technological changes rather than a dramatic improvement in well-being. OI 8: Not rated Difficulties with data availability render this indicator not rated. The Joint Sector Review Report for 2019 maintains a deforestation rate of 2.0% per annum. It indicates that between 2000 and 2015 forest cover decreased from 3.2 m to 2.5 m hectares, reflecting a percentage decline in forest cover of 15.4% to 12.4%. The Water & Environment Issues Paper reports 9.5% forest cover in 2018/19 and a target of 15% for 2024/25. This suggests a forest cover target of 10.5% for 2021. 	Functional and operational water catchment management information system Baseline: 0 (2016) Target: 1 (2019) Actual: 0 (2019) Source: IWM and DP/ISR Off track. The Integrated Water Management and Development Project (approved June 2018 and effective June 2019) is aimed at improving access to water supply and sanitation services, integrated water resources management, and operational performance of water information system. Due to delays, the water information system was established in 2020 and will be fully operational by 2022. Land covered by resilient landscapes program (ha) Baseline: 0 (2018) Target: 100,000 (2021) Actual: 0 (2019) Source: Investing in Forests and Protected Areas for Climate Smart Development/ISR Off track. The Investing in Forests and Protected Areas for Climate Smart Development Project, included in the indicative CPF for FY18, was approved in April 2020. Results have not yet been realized.		Climate funds: Forest and landscape (FY18) IPF: Lake Victoria Environment Management Program III (regional) (FY18) IPF: Irrigation/water management (FY19) IPF: Human development operation (FY20/FY21) – Secondary Education Expansion (FY21) IPF: Energy (FY21) now Energy Access Scale Up (FY21, \$300 m)
--	--	--	--

Strategic Focus Area C: Boosting inclusive growth in urban areas

In the medium to long term, as improvements in technology require agriculture to be less labor intensive and population growth creates fragmentation and potential conflict over land, poverty gains from rural development will wane. Good jobs are the key to translating growth in urban areas into poverty reduction and shared prosperity. Migrants from rural areas and higher-skilled workers alike will need new opportunities for formal employment in urban areas to continue poverty reduction, and accelerated urbanization will be the conduit leading the rural poor to higher standard of living. Urban areas must be prepared for the influx of new residents while maintaining and upgrading key urban services. The private sector must operate in a strong business environment to facilitate investments that lead to more and better jobs.

CPF Objective 5: Improved business environment

Intervention Logic: Most new jobs in Uganda come from MSMEs, but they face a difficult business environment that creates a drag on job creation and dis-incentivizes formalization. At its base, improving the business environment to foster productive MSME growth and help new MSMEs enter the market, as well as encouraging larger businesses to invest, involves maintaining macro-economic stability and easing overly burdensome regulation on business while maintaining necessary rules and policies. But to invest, businesses need access to finance that comes with the certainty, transparency and accountability of land tenure and acquisition and resettlement policies, areas where WBG support will be key. They need security in the knowledge that their costs will be predictable due to a reliable and affordable supply of electricity and urban mobility, and that their outputs will find a market through regional transport links and lower barriers to trade. And they need a steady supply of healthy, educated, and skilled workers to produce their goods and services.

The Bank, MIGA and IFC will provide support in several of these areas: improving the coverage of land registration, expanding access to credit for MSMEs including through use of non-land assets as collateral, expanding the grid to make power more accessible, and supporting the development of demand-driven skills training and improvements in health and education services. The Bank will carry through its existing commitments in inter-city roads, but not provide new support, as other capable partners lead the dialogue there and the government has expressed greater demand in other areas. Since the development of the CPF in FY16, MIGA has issued in Uganda two products focused on expanding access to credit: one capital optimization PRI benefitting Absa Bank's subsidiary in Uganda, and one non-honoring guarantee for the Trade and Development Bank (TDB, regional development bank for the COMESA region) to benefit its member countries including Uganda. Both projects should support liquidity and access to finance in Uganda. This objective contributes to SDGs 8 and 9.

Challenges: Private investment is strongly influenced by the external environment which has been volatile in recent years. There is a time lag between infrastructure investments, improvements in the business environment, and private investment by firms. There are political and capacity challenges to roll out major land registration initiative in a short time frame. Finally, further delays in increasing the generation capacity may restrict affordability and reliability of electricity, which is a key constraint for reducing the cost of doing business.

CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress Update	WBG Program
Objective indicator 9 Number of businesses with loans registered in the collateral registry Baseline: 0 (2015) Target: 6,730 (2021)/15% majority owned by women Actual: 4,659 (of which 569 or 12.3% are majority woman-owned) <i>Source: CEDP project team</i>	Time to register a business (days) Baseline: 27 (2014) Target: 5 (2021) Actual: 1 (2020) <i>Source: Doing Business; CEDP ISR</i>	OI 9. On track The Collateral Registry System (SIMPO) was established, under the Movable Property Act of 2019, and regulations were drafted and gazetted. Rolled out to the public in September 2019, over 4,600 businesses (over 12% of which are woman-owned) have registered loans in the collateral registry. The most used assets to secure loans are motor vehicles and motorcycles (i.e., boba bodas). Most loans for which securities are registered in SIMPO were approved for the transport, agriculture, wholesale/retail, accommodation and food, arts, education, real estate and health sectors. Seventy-five financial and non-financial institutions (including commercial banks, microfinance institutions, licensed money lenders and SACCOs) have signed up as users. Of the over 4,600 borrowers, 86 are MSMEs.	Current program: ASA: Mining Sector Development Support ASA: Petroleum Sector Capacity Needs Analysis IFP: Competitive & Enterprise Development Project IPF: Uganda Support to Municipal Infrastructure Development IPF: Kampala Infrastructure and Institutional Development II IPF: Albertine Region Sustainable Development Project ⁹ IPF: Skills Development Project IPF: North Eastern Road Corridor Asset Management Project IPF: Energy Sector Development Project IPF: Energy for Rural Transformation II IPF: Energy for Rural Transformation III IFC and MIGA: Increasing liquidity of local banks IFC: Capacity building to banks to serve SMEs
Objective indicator 10 Credit to the private sector (billion UGX) Baseline: 6.63 (2014) Target: 20.0 (2021) 22(2022) Actual: 15.09 (2019) <i>Source: BoU website</i>	Time to register land (days) Baseline: 42 (2014) Target: 25 (2021) Actual: 25 (2019) <i>Source: CEDP ISR, MLHUD report manual registration of property</i>		
	Achieved. With support from the Competitiveness and Enterprise Development Project, the number of days to register land decreased to the targeted 25. In some MZOs, it can take only 20 days. The percentage of customers reporting satisfaction with land registration services is 78.5% (2019), exceeding the target of 70% (2020).		
	Urban land registered (%) Baseline: 70 (2014) Target: 90 (2021) Actual: 48.2 (2019) <i>Source: MLHUD report manual registration of property; Land Information System</i>		
	Off track (or not rated?). Definition of what constitutes 'urban land' has changed, and thus indicator cannot be monitored. LEGAM suggests clarifying whether change was affected by statutory amendment or policy change by Government. This would determine what measures the Bank should take in engaging with Government on this issue.		

9 Note that the civil works components of the Albertine Region Sustainable Development Project and of the North Eastern Road Corridor Asset Management Project, were suspended in January 2016. The suspension was lifted in January 2017.

	Gender disaggregated data on urban land registration available Baseline: no (2016) Target: yes (2018) Actual: no (2019) <i>Source: CEDP ISR, MLHUD report manual registration of property</i> Off track Gender disaggregated data on urban land registration is expected to be available in the Land Information System by FY22. Power transmission lines (km) Baseline: 1,590 (2015) Target: 2,035 (2021) Actual: 2,989 (2020) <i>Source: UETCL website/ERA</i> Achieved. The length of power transmission lines currently totals over 2,900 km, exceeding the target of 2,035. The Electricity Sector Development Project (closed in early 2019) financed the construction of 137 km of 220kV high-voltage transmission line. Number of loans disbursed to SMEs as a result of investments in expanding access to credit Baseline: 1,242 (2015) Target: 84,297 (2021) Actual: 383 (2019) <i>Source: IFC</i> Not rated as the methodology used and quality of the data is uncertain. Participation of employers in skills training program Baseline: 82.5 (2017/18) Target: 90 (2020/21) Actual: 86 (2018/19) <i>Source: USDP M&E framework Component 3</i> Note: Data is not national but reflects grantees of the Skills Development Facility under the USDP. On track. After an 18-month delay in project effectiveness, implementation of the Skills Development Project is running about 15 months behind schedule. The Skills Development Facility (component 3) under the Private Sector Foundation Uganda provides support to just-in-time skills development through issuing grants to formal and informal sector employees. All four of the facilities windows are fully operational and supporting skilling initiatives of the private sector.	OI 10. On track WBG contributed to increased credit to the private sector through continuous dialogue. The Economic Update with special focus on financial inclusion (FY16/17) recommended reforms that have been implemented gradually and have contributed to stronger credit growth.	<u>New program (indicative):</u> Financial Sector strategy (FY22) IPF: Grid Expansion and Reinforcement (FY16) TBC: Lake Victoria Transport (regional) (FY17) IFC/IDA: Infrastructure PPP (FY18) IPF: Municipal Infrastructure development/planning (FY19) IPF: Urban Development (FY20) IPF: Energy (FY21) IPF: Financial sector (FY21)
--	--	--	---

CPF Objective 6: Improved access to urban services			
Intervention logic: To sustainably accelerate its urbanization and maintain and improve living standards in urban areas, Uganda needs to prepare for migration to cities and small towns by strengthening the institutional capacity to develop implementable urban master plans to connect transport and services to land use as well as own source revenue mobilization. In terms of improving urban services, the Bank will focus its efforts on access to water and sanitation and electricity. The Bank also supports the government of Uganda is strengthening the land acquisition, resettlement and rehabilitation policy. Additional support may come in the form of analytical work on public transport options, laying the groundwork for future investments as well as technical assistance in selected areas such as strengthening capacity to deliver sanitation and manage fecal sludge. IFC will work opportunistically to make investments in banks to assist with the growth of mortgage products to improve access to housing. This objective contributes to SDGs 9, 11, and 16. Challenges: Population growth in urban areas may move faster than the capacity to plan. The focus of policymakers could remain on current urban areas, without as much concern for outlying areas that will urbanize in the near future. Improving urban mobility is extremely complex, requiring coordinated efforts from multiple ministries, and there is limited demand expressed by the client for the Bank to finance projects in this area.			
CPF Objective Indicators (in fiscal years)	Supplementary Progress Indicators (in fiscal years)	Progress update	WBG Program
Objective indicator 11 Urban population with access to clean water (%) Baseline: 73 (2014) Target: 80 (2021) Actual: 70 (2018) <i>Source: Ministry of Water and Environment Sector Performance Report (2019)</i> Note: There is no projection in the Annual Sector performance report. The problem is that despite an increase in the absolute number of people served in urban areas the administrative changes and addition of towns caused the coverage figure to fall as a percentage. Objective indicator 12 Paved roads in fair to good condition (%) (iii) Municipalities Baseline: 55 (2016) Target: 65 (2021) Actual: 67 (2017) (iv) Kampala Baseline: 64 (2016) Target: 74 (2021) Actual: 70 (2019) <i>Source: Annual Roads Status Reports</i>	Towns with urban physical development plans (%) Baseline: 40 (2014) Target: 70 (2021) Actual: 61 (2018) <i>Source: Physical development plans from National Physical Planning Board</i> On track. From CN PPT: Stephan to verify figures. MoLG has a database of all municipalities/districts so there is no need to take stock of the towns being referred to at the design stage. Also need to reconcile what PDPs are considered since there are PDPs that are existing but expired, and those that exist and require approval and those that are approved and valid. Multi-modal transport plan adopted Baseline: no (2014) Target: yes (2018) Actual: yes (2018) <i>Source: Final report - adopted by KCCA</i> Achieved. The Multi-Modal Transport Master Plan was completed in January 2018, and an Addendum for MMT in July 2019. Number of towns with access to safe sludge and wastewater disposal facilities Baseline: 30 (2014) Target: 40 (2021) Actual: 32 (2018) <i>Source: Ministry of Water and Environment Sector Performance Report</i> Off track: Urbanization is proceeding faster than sector expansion. Integrated Water Management and Development Project (approved Jun 2018; effective Jun 2019), which finances waste supply and sanitation investments to improve coverage, quality, and efficiency of services in prioritized large and small towns, reports no progress yet on improved access to water supply and sanitation services. Electricity consumers reached through investments in distribution - IFC Baseline: 2.6 (2015) Target: 2.99 (2021) Actual: 7.2 (June 2020) <i>Source: Uganda Ministry of Energy and Mineral Development</i> On track. Note: The 7.2 is equal to 1,526,000 connections as of June 2020 times 4.7 people (which is the average number of people per household according to UBOS). Clearly here the target of 2.99 by 2021 will be significantly exceeded. This can be explained by the significant push made by Umeme to raise both commercial & concessional financing to go towards increased connections, and by the government through the Electricity Connection Program implemented in 2019.	OI 11. Off track The percentage of the urban population with access to clean water declined from 73% in 2014 to 70% in 2018 due in part to the fact that urbanization is outpacing sector expansion. The Water and Environment Sector Performance Report notes the difficulty of obtaining accurate data, citing administrative changes, the addition of towns, changing measurements from towns with small pumps to towns with piped water, etc. The report does note that the population using an improved drinking water source in urban areas increased from 77% in June 2018 to 79% in June 2019. This increase was attributed to completion of water supply systems in Koboko, Rukungiri, Pallisa and Katwe – Kabatoro, and additional connections by UWS. Access to safely managed water (available on premises) was estimated at 57.2% compared to 20% in June 2018. 6,140 additional villages (local council 1s) in urban areas were provided an improved water source. Construction of 12 small towns water supply systems with 3,755 public stand posts (PSP) and 3,550 PSP in large towns was completed. As of June 2019, large towns under NWSC had an average of 18 hours per day of service. The Integrated Water Management and Development Project which seeks to provide people with access to improved water sources was declared effective in June 2019. Results have not yet been realized. OI 12. (i) Achieved Under USMID, as of Feb 2020, municipal roads built or rehabilitated with related infrastructure using urban LDG increased from a baseline of 53.02 km (2018) to 78.40 km (2019) compared to a target of 150.00 km (2023), contributing to the achievement of this outcome.	Current program: ASA: Repositioning Local Governments for Economic Growth ASA: Private Sector Provision of Water and Sanitation in Small Towns IPF: Uganda Support to Municipal Infrastructure Dev't IPF: Kampala Infrastructure and Institutional Development II IFC: Waste Management PPP IPF: Albertine Region Sustainable Development Project IPF: Water Management & Development Project IPF: Energy Sector Development Project IFC: Investment in electricity distribution New program (indicative): IPF: Grid Expansion and Reinforcement (FY16) IPF: Water Management and Development Project – AF (FY17) IPF: Social development (FY17) IFC/IDA: Infrastructure PPP (FY18) IPF: Municipal infrastructure development/planning (FY19) IPF: Water/sanitation (FY20) IPF: Urban development (FY20) IPF: Energy (FY21) IPF: Financial sector (FY21)

		(ii) On track. The Second Kampala Infrastructure and Development Project (approved Mar 2014; effective May 2015; closed Dec 2019) delivered 37.07 km of paved roads (Nov 2019), well short of the target of 85 km (Dec 2019). Number of people in urban areas with access to all-season roads within a 500-meter range totaled over 1.5 m (Nov 2019) exceeding the target of 1.05 m (Dec 2019). 80% of the public was satisfied with roads and drainages, exceeding the target of 50%. North Eastern Road-corridor Asset Management Project (approved 3/14; effective 7/15, suspended; rev closing 10/24) finances rehabilitation, maintenance, operation and mgmt. of Tororo-Kamdini road corridor. The project is implemented by UNRA through an Output and Performance-based Road contract.

IDA 19 commitments

The Uganda portfolio is responding to IDA19 commitments. The planned portfolio under IDA19 (already delivered and pipeline) responds to the IDA19 commitment on Jobs and Economic transformation. The planned operations building on the ongoing portfolio are focused on enhancing growth and development in the sectors of education, transport, health, energy, digital, urban development, and agriculture. With agriculture as the sector employing the most people, the intervention is expected to support enhancement of productivity and enhancing activities across the value chain. With respect to gender and development, the key intervention aims to enhance human development in general and economic empowerment to women. Gender responsiveness is a critical factor and cross cutting within the entire portfolio. Deliberate efforts have been made in all interventions to address the gender perspective. Climate change is another crosscutting intervention. The planned Climate Smart Agriculture and Agribusiness project is planned to have interventions in the agriculture sector that directly respond to climate change. On Governance and Institutions, the portfolio includes efforts to strengthen the governance environment especially in the areas of public procurement and financial management. Support for enhancing institutional capacity is also provided to the extent possible. The support includes complementing the efforts already being made by the client. The Governance commitment is also supported by the World Bank's ASA portfolio. Below is a table outlining the IDA19 financed interventions as they respond to the commitments.

Table 5.3. IDA 19 commitments

IDA 19 Commitment	Planned interventions under IDA19 (Delivered and Pipeline)
Jobs and Economic Transformation	1. Secondary Education Expansion project (P166570) 2. UglIFT – AF (P172868) 3. Roads and Bridges for Refugee Hosting Districts (P171339) 4. Investment for Industrial Transformation and Employment (P171607) 5. Electricity Access Scale-Up project (P166685) 6. Digital Acceleration project (P171305) 7. Greater Kampala Metropolitan Area (P175660) 8. Climate Smart Agriculture and Agribusiness (P173296) 9. COVID-19 Health Response (Vaccines) 10. Roads and Bridges – AF 11. Uganda-Tanzania Interconnector (Regional)
Gender and Development	HD and Women Economic Empowerment
Climate Change	Climate Smart Agriculture and Agribusiness (P173296)
Fragility, Conflict and Violence (FCV)	
Governance and Institutions
